CC zinc, can induce histidine-bridging between beta-amyloid molecules
CC resulting in beta-amyloid-metal aggregates (By similarity).
CC Extracellular zinc-binding increases binding of heparin to APP and
CC inhibits collagen-binding (By similarity).
CC -1- SIMILARITY: Belongs to the APP family.
CC -1- SIMILARITY: Contains 1 BPTI/Kunitz inhibitor domain.

 RN [1]
 RP FUNCTION: Functions as a cell surface receptor and performs

CC physiological functions on the surface of neurons relevant to
 CC neurite growth, neuronal adhesion and axonogenesis. Involved in
 CC cell mobility and transcription regulation through protein-protein
 CC interactions. Can promote transcription activation through binding
 CC to APBB1/Tip60 and inhibit Notch signaling through interaction
 CC with Numb. Couples to apoptosis-inducing pathways such as those
 CC mediated by G(O) and JIP. Inhibits G(O) alpha ATPase activity (By
 CC similarity). Acts as a kinesin I membrane receptor, mediating the
 CC axonal transport of beta-secretase and presenilin 1. May be
 CC involved in copper homeostasis/oxidative stress through copper ion
 CC reduction. Can regulate neurite outgrowth through binding to
 CC components of the extracellular matrix such as heparin and
 CC collagen I and IV (By similarity). The splice isoforms that
 CC contain the BPTI domain possess protease inhibitor activity (By
 CC similarity).
 CC FUNCTION: Beta-amyloid peptides are lipophilic metal chelators
 CC with metal-reducing activity. Bind transient metals such as
 CC copper, zinc and iron. Rat and mouse beta-amyloid peptides bind
 CC only weakly transient metals and have little reducing activity due
 CC to substitutions of transient metal chelating residues. Beta-APP42
 CC may activate mononuclear phagocytes in the brain and elicit
 CC inflammatory responses. Promotes both tau aggregation and TPX II-
 CC mediated phosphorylation (By similarity).
 CC FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved
 CC peptides, including C31, are potent enhancers of neuronal
 CC apoptosis.
 CC SUBUNIT: Binds, via its C-terminus, to the PID domain of several
 CC cytoplasmic proteins, including APBB family members, the APBA
 CC family, MAPK8IP1, SHC1, Numb and Dab1. Binding to Dab1 inhibits
 CC its serine phosphorylation. Also interacts with GPCR-like protein
 CC BPP, PPRL1, APPBP1, IBI, KNS2 (via its TPR domains), APPBP2 (via
 CC BASS) and DDB1 (By similarity). In vitro, it binds MAPT via the
 CC MT-binding domains (By similarity). Associates with microtubules
 CC in the presence of APP and in a kinesin-dependent manner (By
 CC similarity). Interacts, through a C-terminal domain, with GNAO1
 CC (By similarity). Amyloid beta-42 binds CHRNA7 in hippocampal
 CC neurons (By similarity). Beta-amyloid associates with HADH2 (By
 CC similarity).
 CC INTERACTION:
 CC P98084:Apba2; NbExp=1; IntAct=EBI-78814, EBI-81669;
 CC Q90XJ1:Apbb1; NbExp=1; IntAct=EBI-78814, EBI-81338;

CC -!- FUNCTION: Functions as a cell surface receptor and performs
CC physiological functions on the surface of neurons relevant to
CC neurite growth, neuronal adhesion and axonogenesis. Involved in
CC cell motility and transcription regulation through protein-protein
CC interactions (By similarity). Can promote transcription activation
CC through binding to APBB1/rip60 and inhibit Notch signaling through
CC interaction with Numb (By similarity). Couples to apoptosis-
CC inducing pathways such as those mediated by G(O) and JIP (By
CC similarity). Inhibits G(o) alpha ATPase activity (By similarity).
CC Acts as a kinesin I membrane receptor, mediating the axonal
CC transport of beta-secretase and presenilin 1 (By similarity). May
CC be involved in copper homeostasis/oxidative stress through copper
CC ion reduction. In vitro, copper-metallated APP induces neuronal
CC death directly or is potentiated through Cu(2+)-mediated low-
CC density lipoprotein oxidation (By similarity). Can regulate
CC neurite outgrowth through binding to components of the
CC extracellular matrix such as heparin and collagen I and IV (By
CC similarity). The splice isoforms that contain the BPTI domain
CC possess protease inhibitor activity (By similarity).

CC -!- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators
CC with metal-reducing activity. Bind transient metals such as
CC copper, zinc and iron (By similarity).

CC -!- FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved
CC peptides, including C31, are potent enhancers of neuronal
CC apoptosis (By similarity).

CC -!- SUBUNIT: Binds, via its C-terminus, to the PID domain of several
CC cytoplasmic proteins, and SHC1, Numb and Dab1 (By similarity). Binding
CC family, MAPK8IP1, and SHC1, Numb and Dab1 (By similarity). Binding
CC to Dab1 inhibits its serine phosphorylation (By similarity). Also
CC interacts with GPCR-like protein BPP, FRLP1, IBL, KNS2
CC (via its TPR domains) (By similarity), APPBP2 (via Bass) and DDB1.
CC In vitro, it binds MAPT via the WT-binding domains (By
CC similarity). Associates with microtubules in the presence of ATP
CC and in a kinesin-dependent manner (By similarity).

CC -!- SUBCELLULAR LOCATION: Type I membrane protein. Cell surface
CC protein that rapidly becomes internalized via clathrin-coated
CC pits. During maturation, the immature APP (N-glycosylated in the
CC endoplasmic reticulum) moves to the Golgi complex where complete
CC maturation occurs (O-glycosylated and sulfated). After alpha-
CC secretase cleavage, soluble APP is released into the extracellular
CC space and the C-terminal is internalized to endosomes and
CC lysosomes. Some APP accumulates in secretory transport vesicles
CC leaving the late Golgi compartment and returns to the cell
CC surface. Gamma-CTF(59) peptide is located to both the cytoplasm
CC and nuclei of neurons (By similarity).

CC -!- DOMAIN: The basolateral sorting signal (Bass) is required for
CC sorting of membrane proteins to the basolateral surface of
CC epithelial cells (By similarity).

CC -!- DOMAIN: The NPXY sequence motif found in many tyrosine-
CC phosphorylated proteins is required for the specific binding of
CC the PID domain. However additional amino acids either N- or C-
CC terminal to the NPXY motif are often required for complete
CC interaction. The PID domain-containing proteins which bind APP
CC require the YENPY motif for full interaction. These interactions
CC are independent of phosphorylation on the terminal tyrosine
CC residue. The NPXY site is also involved in clathrin-mediated
CC endocytosis (By similarity).

CC -!- PTM: Proteolytically processed under normal cellular conditions.
CC Cleavage by alpha-secretase or alternatively by beta-secretase
CC leads to generation and extracellular release of soluble APP
CC peptides, S-APP-alpha and S-APP-beta, respectively, and the
CC retention of corresponding membrane-anchored C-terminal fragments,
CC C83 and C99. Subsequent processing of C83 by gamma-secretase
CC yields p3 peptides. This is the major secretory pathway and is
CC nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated
CC gamma-secretase processing of C99 releases the amyloid beta

CC proteins, amyloid-beta 40 (Abeta40) and amyloid-beta 42 (Abeta42),
CC major components of amyloid plaques, and the cytotoxic C-terminal
CC fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59) (By
CC similarity).

CC -!- PTM: Proteolytically cleaved by caspases during neuronal apoptosis
CC (By similarity). Cleavage at Asp-739 by either caspase-3, -8 or -9
CC results in the production of the neurotoxic C31 peptide and the
CC increased production of beta-amyloid peptides (By similarity).

CC -!- PTM: N- and O-glycosylated (By similarity).

CC -!- PTM: Phosphorylation in the C-terminal on tyrosine, threonine and
CC serine residues is neuron-specific. Phosphorylation can affect APP
CC processing, neuronal differentiation and interaction with other
CC proteins (By similarity).

CC -!- MISCELLANEOUS: Chelation of metal ions, notably copper, iron and
CC zinc, can induce histidine-bridging between beta-amyloid molecules
CC resulting in beta-amyloid-metal aggregates (By similarity).
CC Extracellular zinc-binding increases binding of heparin to APP and
CC inhibits collagen-binding (By similarity).

CC -!- SIMILARITY: Belongs to the APP family.

CC -!- SIMILARITY: Contains 1 BPTI/Kunitz inhibitor domain.

CC -!- FUNCTION: Functions as a cell surface receptor and performs physiological functions on the surface of neurons relevant to neurite growth, neuronal adhesion and axonogenesis. Involved in cell mobility and transcription regulation through protein-protein interactions (By similarity). Can promote transcription activation through binding to APBB1/Tip60 and inhibit Notch signaling through interaction with Numb (By similarity). Couples to apoptosis-inducing pathways such as those mediated by G(O) and JIP (By similarity). Inhibits G(o) alpha APase activity (By similarity). Acts as a kinesin I membrane receptor, mediating the axonal transport of beta-secretase and presenilin 1 (By similarity). May be involved in copper homeostasis/oxidative stress through copper ion reduction (By similarity). In vitro, copper-metalated APP induces neuronal death directly or is potentiated through Cu(2+)-mediated low-density lipoprotein oxidation (By similarity). Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I and IV (By similarity).
CC -!- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators with metal-reducing activity. Bind transient metals such as copper, zinc and iron (By similarity).
CC -!- FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved peptides, including C31, are potent enhancers of neuronal apoptosis (By similarity).
CC -!- SUBUNIT: Binds, via its C-terminus, to the PID domain of several cytoplasmic proteins, including APBB family members, the APBA family, MAPK8IP1, and SHC1, Numb and Dab1 (By similarity). Binding to Dab1 inhibits its serine phosphorylation (By similarity). Also interacts with GPCR-like protein BPP, FPR1, APPB1, IB1, KNS2 (via its TPR domains) (By similarity), APPB2 (via BASS) and DDB1. In vitro, it binds MAPT via the MT-binding domains (By similarity). Associates with microtubules in the presence of ATP and in a kinesin-dependent manner (By similarity).
CC -!- SUBCELLULAR LOCATION: Type I membrane protein. Cell surface protein that rapidly becomes internalized via clathrin-coated pits. During maturation, the immature APP (N-glycosylated in the endoplasmic reticulum) moves to the Golgi complex where complete maturation occurs (O-glycosylated and sulfated). After alpha-secretase cleavage, soluble APP is released into the extracellular space and the C-terminal is internalized to endosomes and lysosomes. Some APP accumulates in secretory transport vesicles leaving the late Golgi compartment and returns to the cell surface. Gamma-CTF(59) peptide is located to both the cytoplasm and nuclei of neurons (By similarity).
CC -!- DOMAIN: The basolateral sorting signal (BASS) is required for sorting of membrane proteins to the basolateral surface of epithelial cells (By similarity).
CC -!- DOMAIN: The NPXY sequence motif found in many tyrosine-phosphorylated proteins is required for the specific binding of the PID domain. However additional amino acids either N- or C-terminal to the NPXY motif are often required for complete interaction. The PID domain-containing proteins which bind APP require the YENPTY motif for full interaction. These interactions are independent of phosphorylation on the terminal tyrosine residue. The NPXY site is also involved in clathrin-mediated endocytosis (By similarity).
CC -!- PTM: Proteolytically processed under normal cellular conditions. Cleavage by alpha-secretase or alternatively by beta-secretase leads to generation and extracellular release of soluble APP peptides, S-APP-alpha and S-APP-beta, respectively, and the

retention of corresponding membrane-anchored C-terminal fragments, C83 and C99. Subsequent processing of C83 by gamma-secretase yields P3 peptides. This is the major secretory pathway and is nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated gamma-secretase processing of C99 releases the amyloid beta proteins, amyloid-beta 40 (Aβeta40) and amyloid-beta 42 (Aβeta42), major components of amyloid plaques, and the cytotoxic C-terminal fragments, gamma-CTF (50), gamma-CTF (57) and gamma-CTF (59) (By similarity).

-!- PTM: Proteolytically cleaved by caspases during neuronal apoptosis (By similarity). Cleavage at Asp-739 by either caspase-3, -8 or -9 results in the production of the neurotoxic C31 peptide and the increased production of beta-amyloid peptides (By similarity).

-!- PTM: N- and O-glycosylated (By similarity).

-!- PTM: Phosphorylation in the C-terminal on tyrosine, threonine and serine residues is neuron-specific. Phosphorylation can affect APP processing, neuronal differentiation and interaction with other proteins (By similarity).

-!- PTM: Extracellular binding and reduction of copper, results in a corresponding oxidation of Cys-144 and Cys-158, and the formation of a disulfide bond (By similarity).

-!- MISCELLANEOUS: Chelation of metal ions, notably copper, iron and zinc, can induce histidine-bridging between beta-amyloid molecules resulting in beta-amyloid-metal aggregates (By similarity). Extracellular zinc-binding increases binding of heparin to APP and inhibits collagen-binding (By similarity).

-!- SIMILARITY: Belongs to the APP family.

-!- SIMILARITY: Contains 1 BPTi/Kunitz inhibitor domain.

 RP FUNCTION. Functions as a cell surface receptor and performs
 physiological functions on the surface of neurons relevant to
 neurite growth, neuronal adhesion and axonogenesis. Involved in

cell mobility and transcription regulation through protein-protein interactions (By similarity). Can promote transcription activation through binding to APBB1/Tip60 and inhibit Notch signaling through interaction with Numb (By similarity). Couples to apoptosis-inducing pathways such as those mediated by G(O) and JIP. Inhibits G(O) alpha ATPase activity. Acts as a kinesin I membrane receptor, mediating the axonal transport of beta-secretase and presenilin 1 (By similarity). May be involved in copper homeostasis/oxidative stress through copper ion reduction. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I and IV (By similarity). The splice isoforms that contain the BPTI domain possess protease inhibitor activity (By similarity).

-!- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators with metal-reducing activity. Bind transient metals such as copper, zinc and iron. Rat and mouse beta-amyloid peptides bind only weakly transient metals and have little reducing activity due to substitutions of transient metal chelating residues. Beta-APP42 may activate mononuclear phagocytes in the brain and elicit inflammatory responses. Promotes both tau aggregation and TPK II-mediated phosphorylation (By similarity).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
 US-09-867-847-13
 ; Sequence 13, Application US/09867847
 ; Patent No. US20020094335A1
 ; GENERAL INFORMATION:
 ; APPLICANT: Chalfour, Robert
 ; APPLICANT: Hebert, Lise
 ; APPLICANT: Kong, Xianqi
 ; APPLICANT: Gervais, Francine
 ; TITLE OF INVENTION: VACCINE FOR THE PREVENTION AND TREATMENT OF ALZHEIMER'S
 ; TITLE OF INVENTION: AND AMYLOID RELATED DISEASES
 ; FILE REFERENCE: 14445-501 CIP
 ; CURRENT APPLICATION NUMBER: US/09/867,847
 ; CURRENT FILING DATE: 2001-09-20

; PRIOR APPLICATION NUMBER: 60/168,594
 ; PRIOR FILING DATE: 1999-11-29
 ; PRIOR APPLICATION NUMBER: 09/724,842
 ; PRIOR FILING DATE: 2000-11-28
 ; NUMBER OF SEQ ID NOS: 65
 ; SOFTWARE: PatentIn Ver. 2.1
 ; SEQ ID NO 13
 ; LENGTH: 6
 ; TYPE: PRT
 ; ORGANISM: Artificial Sequence
 ; FEATURE:
 ; OTHER INFORMATION: Description of Artificial Sequence: All D peptides
 ; OTHER INFORMATION: or peptidomimetics
 ; US-09-867-847-13

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; INFORMATION FOR SEQ ID NO: 2:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 506 amino acids
; TYPE: amino acid
; STRANDEDNESS: not relevant
; TOPOLOGY: not relevant
```

MOLECULE TYPE: peptide
 FEATURE:
 NAME/KEY: Protein
 LOCATION: 1..506
 OTHER INFORMATION: /note= "Amino acid sequence of PAE1
 OTHER INFORMATION: protein."
 US-09-362-633-2

Query Match 90.3%; Score 28; DB 2; Length 506;
 Best Local Similarity 83.3%; Pred. No. 5.1e+02;
 Matches 5; Conservative 1; Mismatches 0; Indels 0; Gaps 0;

 XX PT Preventing/treating amyloid-related disease, especially Alzheimer's
 PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.
 XX PS Disclosure; Page 11; 31pp; English.
 XX CC The present sequence is that of an all-D peptide suitable for use for
 CC preparing vaccines for preventing or treating Alzheimer's disease and

CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid
 PT plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 21; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A t-(A 1 n k) z-A 1 a b (I) where z = 0 - 1;
 CC A t = an amyloid targeting moiety; A 1 n k = a linker moiety; and A 1 a b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (1), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), Kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A-t-(A-l)n-k-z-A-l-a-b (1) where z = 0 - 1;
 CC A-t = an amyloid targeting moiety; A-l-n-k = a linker moiety; and A-l-a-b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (1) to the patient, and ultrasound imaging (1) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (1), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementias), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 PS The present invention relates to a new method of inhibiting cerebral
 CC amyloid angiopathy. The new method of the invention involves contacting a
 CC blood vessel wall cell with an amyloid-beta40 inhibitor. The invention
 CC can be used for treating disease states characterised by cerebral amyloid
 CC angiopathy, particularly Alzheimer's disease, hereditary cerebral
 CC haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke.
 CC The present sequence represents one of a group of peptides (AAU11648-
 CC AAU11669, AAU11910 & AAU11911) that were used in the invention as a
 CC carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
 CC was used in the invention to treat a disease state characterised by
 CC cerebral amyloid angiopathy (CAA)

 XX Claim 1; Page 59; 44pp; English.
 XX CC The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

Also described is a kit comprising (C). (C) have nootropic, neuroprotective, cerebroprotective, haemostatic, ophthalmological, antithyroid, vasotropic, cardiovascular, muscular, uropathic, anticonvulsant, anti-HIV, antiparkinsonian, muscular, neuroleptic, cardiant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, mild-to-moderate cognitive impairment, vascular dementia, cerebral amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, Down's syndrome, inclusion body myositis, age-related macular degeneration, or a condition associated with Alzheimer's disease (including hypothyroidism, cerebrovascular disease, cardiovascular disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, aggression, or incontinence), a neurological condition (e.g. Huntington's disease, amyotrophic lateral sclerosis, acquired immunodeficiency, Parkinson's disease, aphasia, apraxia, agnosia, Pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual field deficits, incoordination, gait disturbance, transient ischaemic attack or stroke, transient alertness, attention deficit, frequent falls, syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural haematoma, brain tumour, posttraumatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, delusions, disturbance, insomnia, sexual disorder, weight loss, psychosis, a sleep ideation, depressed mood, irritability, anhedonia, social withdrawal, or excessive guilt)) in a subject e.g. human having a presenilin gene; having amyloid-beta deposits. The present sequence represents a peptide that can be used as an antifibrillogenic amyloidosis inhibiting peptide in the exemplification of the present invention.

XX PT New amyloid-targeting imaging agent, useful for diagnosing an amyloid-related condition, e.g. Creutzfeld-Jakob disease, bovine spongiform encephalopathy, primary amyloidosis or Alzheimer's disease.
XX PS Disclosure; SEQ ID NO 11; 34pp; English.
XX CC The invention relates to an amyloid-targeting imaging agent. The imaging agent comprises an amyloid targeting moiety (such as a peptide) joined to a labeling moiety via a linking moiety, and is preferably able to cross the blood-brain barrier. The invention also relates to a kit for preparing a radiopharmaceutical preparation from the imaging agent of the invention, a method for imaging amyloid deposition in a patient and a method for diagnosing an amyloid-related condition in a patient. The amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-related conditions such as Creutzfeld-Jakob disease (CJD), Kuru, transmissible cerebral amyloidoses (also known as transmissible virus dementias), familial CJD, scrapie, transmissible mink encephalopathy, bovine spongiform encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-mediated diseases, dialysis-related amyloidosis, light chain-related amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a patient. The agent does not exhibit excessive toxicity or irritation, does not induce an allergic response, and permits an earlier diagnosis of

CC amyloid-related conditions, thereby allowing earlier treatment and hence prevention of the undesirable effects of such disorders. Sequences ADY37921-ADY3947 and ADY37949 represent peptides which may be used as the amyloid-targeting moiety in an imaging agent of the invention.

 PT New stress-responsive nucleic acid, useful for altering the
 PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
 PT stress, salt stress or osmotic stress.

XX Claim 1; SEQ ID NO 7432; 89pp; English.

XX
 CC The invention relates to novel abiotic stress responsive polynucleotides
 CC and polypeptides. Also disclosed are vectors, expression cassettes, host
 CC cells, and plants containing such polynucleotides. Also disclosed are
 CC methods for using the polynucleotides and polypeptides to alter the
 CC responsiveness of a plant to abiotic stress. The invention is useful in
 CC agriculture. The nucleic acid is useful for determining whether a test
 CC plant has been exposed to an abiotic stress condition. It is also useful
 CC for selecting an agent that alters abiotic stress regulated
 CC polynucleotide expression in a plant cell, and to identify a homolog or
 CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
 CC molecule and the polypeptide encoded by it are useful in altering the
 CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
 CC stress, osmotic stress or any of their combinations. The present sequence
 CC is used in the exemplification of the invention

 PT for treating, e.g., Parkinson's, Alzheimer's, cancer, arthritis, Crohn's
 PT disease, and inflammatory bowel disease.

XX Claim 20; SEQ ID NO 7702; 504pp; English.

XX This invention relates to a novel isolated polynucleotide comprising a
 CC nucleotide sequence selected from one of 1680 sequences, a mature protein
 CC coding portion of them, an active domain of them and their complementary
 CC sequences. The invention may be useful for the production of compounds
 CC with an antiarthritic, antiparkinsonian, neuroprotective, nootropic,
 CC immunosuppressive, cytostatic, antiposrotic, antiinflammatory, In
 CC antibacterial, antiviral, antifungal or antiparasitic activity. In
 CC addition, the disclosed sequences may be useful for gene therapy. The
 CC polypeptides or their antibodies are useful for treating many diseases
 CC such as arthritis, Parkinson's, Alzheimer's, autoimmune diseases, cancer,
 CC psoriasis, inflammatory bowel disease and infections caused by bacteria,
 CC viruses, fungi or parasites. The present sequence is that of a human
 CC polypeptide of the invention.

 PT useful for preventing, diagnosing and/or treating nervous system cancers
 PT and metastases.
 XX
 PS Claim 11; SEQ ID NO 6646; 1701pp + Sequence Listing; English.
 XX
 CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
 CC (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating
 CC medical conditions e.g. by protein or gene therapy. The genes are
 CC isolated from a range of human tissues disclosed in the specification.
 CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
 CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
 CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
 CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
 CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
 CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
 CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
 CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
 CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
 CC infectious diseases such as viral, bacterial, fungal and parasitic
 CC infections. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at fip.wipo.int/pub/published_pct_sequences

 XX
 PT New recombinant DNA construct comprising a promoter positioned to provide
 PT for expression of a polynucleotide encoding a polypeptide from a
 PT microbial source, useful for producing plants with improved properties.
 XX
 PS Claim 1; SEQ ID NO 6279; 122pp; English.
 XX
 CC The invention relates to a recombinant DNA construct comprising a
 CC promoter functional in a plant cell, where the promoter is positioned to
 CC provide for expression of a polynucleotide encoding a polypeptide from a
 CC microbial source. The invention also relates to a transformed plant
 CC comprising the recombinant DNA construct and a method of producing a
 CC transformed plant having an improved property. The plant is a crop plant
 CC such as maize or soybean. The method of producing a transformed plant
 CC having an improved property comprises transforming a plant with the
 CC recombinant DNA construct and growing the transformed plant, where the
 CC polynucleotide or polypeptide is useful for improving plant properties.
 CC The recombinant DNA construct is useful for producing plants with
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
 CC increased resistance to plant disease, better growth rate by modification
 CC of the cell cycle pathway with plant growth regulators, increased rate of
 CC homologous recombination, modified seed oil or protein yield and/or
 CC content, improved yield by modification of carbohydrate, nitrogen or
 CC phosphorus use and/or uptake, by modification of photosynthesis or by
 CC providing improved plant growth and development under at least one stress
 CC condition, improved lignin production or improved galactomannan
 CC production. This sequence represents a bacterial polypeptide used in the
 CC scope of the invention. Note: The sequence data for this patent did not
 CC form part of the printed specification but was obtained in electronic
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX PT Method for disrupting targeted gene in genome of organism particularly
PT thermostable bacterium and with genome chips for analysis, applicable in
PT studying gene structure and functions.
XX
XX PS Claim 9; SEQ ID NO 618; 598pp; Japanese.
XX
XX CC This invention relates to a novel method for targeting disruption of an
CC arbitrary gene in a genome of an organism which comprises providing the
CC whole sequential data of the genome of such organism, selecting at least
CC 1 arbitrary region in the sequence, providing a vector that contains a
CC sequence homologous with the selected region and a marker gene,
CC transformation, and homologous recombination. The genome is preferably
CC the genome of a hyperthermostable archaeobacterium, particularly
CC Thermococcus kodakaraensis KOD1. The method is for targeting the
CC disruption of a gene in the genome of an organism, which is applicable in
CC studying gene structure and functions as well as enzyme activities of
CC encoded proteins and useful in medicine, forensic science, food or drug
CC inspection, molecular biology and immunology. With this method, the
CC disruption of a gene at an arbitrary position in a genome can be achieved
CC efficiently and reliably. The present sequence is that of a protein
CC encoded by the genome of Thermococcus kodakaraensis which was derived
CC using the method of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 XX
 XX New DNA constructs contg. FAE1 gene sequences - used to produce
 PT transgenic plants with modified fatty acid content in plant organs or
 PT parts, esp. seeds.
 XX
 XX Example 1; Page 36; 48pp; English.
 XX
 XX Arabidopsis fatty acid elongation enzyme FAE1 (AAR95594) catalyses the
 CC conversion of oleic acid (18:1) to eicosenoic acid (20:1) and of
 CC eicosenoic acid to erucic acid (22:1). Its amino acid sequence was
 CC deduced from that of a clone (AAT27036) isolated from a cDNA library
 CC prep'd. from Arabidopsis green siliques. Expression of the FAE1 enzyme in
 CC transgenic plants, e.g. Brassica napus, can be used to modulate the fatty
 CC acid content of the plant, partic. the seed oil. Use of antisense DNA
 CC constructs suppresses the native FAE1 gene, allowing prodn. of edible
 CC oils with reduced content of very long chain fatty acids (VLCFA). Use of
 CC sense DNA constructs allows prodn. of oils with raised VLCFA content for
 CC industrial use. (Updated on 16-OCT-2003 to standardise OS field)

 PT New expression vector for transforming a cell comprising a gene coding
 PT for a plant fatty acid elongase, useful for altering erucic acid content
 PT or the very long chain fatty acid content (C20 or greater) in a plant.
 XX
 PS Disclosure; SEQ ID NO 26; 72pp; English.
 XX
 CC The invention relates to an expression vector for transforming a cell.
 CC The expression vector comprises a gene coding for a plant fatty acid
 CC elongase (FAE, also designated 3-ketoacyl-CoA synthase (KCS)) in reading
 CC frame alignment with a promoter capable of increasing the expression of
 CC the gene, when the transformed cell is in a seed, sufficient to increase
 CC the proportion of very long chain monounsaturated fatty acid when
 CC compared with a control cell. Also described are: (1) a cell comprising a
 CC heterologous gene coding for a heterologous plant fatty acid elongase or
 CC its allelic variant, the cell being capable of producing an increase in
 CC proportion of a very long chain monounsaturated fatty acid when compared
 CC a control cell lacking the heterologous gene; (2) a seed comprising the
 CC plant cells above; (3) a plant comprising the plant cells; and (4) a
 CC method of altering erucic acid content of a plant-derived oil. The gene
 CC coding for a plant fatty acid elongase is a Nasturtium, Crambe, or
 CC Arabidopsis fatty acid elongase gene. The cell is a fungal cell,
 CC preferably yeast cell, or a plant cell, specifically a plant seed cell.
 CC The plant cell additionally comprises a further heterologous gene coding
 CC for an additional heterologous plant fatty acid elongase or its allelic
 CC variant or a heterologous plant desaturase gene or its allelic variant.
 CC It is capable of producing oil with an increased content of erucic acid
 CC or other very long chain fatty acid (C20 or greater). The heterologous
 CC gene codes for a 3-ketoacyl-CoA synthase. The very long chain
 CC monounsaturated fatty acid comprises erucic acid. The heterologous plant
 CC fatty acid elongase gene is useful for altering erucic acid content in a
 CC plant or the very long chain fatty acid content (C20 or greater) in a
 CC plant. The vector is useful for altering erucic acid content in a plant.

CC This sequence represents a *Arabidopsis* sp. FAE1.

XX New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 47052; 1766pp; English.

CC The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than *S. aureus*, *S. typhimurium*, *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of the target prokaryotic essential genes. PS Claim 25; SEQ ID NO 51929; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids

CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 2154; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with

CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

 PT New recombinant DNA construct, useful for improving plant tolerance to
 PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
 PT pests, for conferring increased resistance to plant disease, or for
 PT improving yield.
 XX
 PS Claim 1; SEQ ID NO 38807; 15pp; English.
 XX
 CC The invention describes a recombinant DNA construct comprising a
 CC polynucleotide consisting of a sequence encoding an amino acid sequence
 CC available in electronic form from the US patent office at
 CC ftp.segdata.uspto.gov/sequence.html?docID:2004034888. The polynucleotide
 CC of the invention are also useful in physical arrays of molecules and as
 CC plant breeding markers. The recombinant DNA construct is useful for
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme

CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This is the amino acid sequence of a plant full length insert
CC polypeptide that can be used in the recombinant DNA construct of the
CC invention.

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-451937/48.
XX N-PSDB; AAL34771.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
XX disorders related to the musculoskeletal system including musculoskeletal
XX cancers and also for testing and detection e.g. diagnosis.
XX
XX Claim 11; SEQ ID NO 1136; 781pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
XX (ABR03087-ABR04109) associated with the musculoskeletal system useful for
XX preventing, treating or ameliorating medical conditions e.g. by protein
XX or gene therapy. The genes are isolated from a range of human tissues
XX disclosed in the specification. The nucleic acids, proteins, antibodies
XX and (ant)agonists are useful in the diagnosis, treatment and prevention
XX of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
XX adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
XX lung, or urogenital; (b) immune disorders e.g. Addison's disease,
XX allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
XX diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
XX arthritis and ulcerative colitis; (c) cardiovascular disorders such as
XX myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
XX cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
XX bacterial, fungal and parasitic infections. Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX New nucleic acid molecule, useful for preparing a medicament for
PT preventing, treating or ameliorating a medical condition e.g., cancer of
PT musculoskeletal tissues or osteoporosis.
XX
XX Claim 11; SEQ ID NO 1136; 289pp; English.
XX
XX The invention relates to a novel isolated musculoskeletal system-
CC associated nucleic acid molecule. The nucleic acid of the invention
CC demonstrates cytostatic and osteopathic activities and may be useful for
CC preparing a medicament for preventing, treating or ameliorating a medical
CC condition such as cancer of the musculoskeletal tissues or osteoporosis,
CC possibly via gene therapy or vaccine production. The current sequence is
CC that of the human musculoskeletal system-associated polypeptide of the
CC invention. The current sequence is not shown within the specification per
CC se but is available on the USPTO web-site
CC http:seqdata.uspto.gov/sequence.html?DocID=20040009488.

 XX
 PT New nucleic acid that is a 5' expressed sequence tag (5' EST) for
 PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
 PT diagnostic, forensic, gene therapy and chromosome mapping procedures.
 XX
 PS Claim 13; SEQ ID NO 4859; 71pp + Sequence Listing; English.
 XX
 CC The present sequence is a polypeptide encoded by one of a large number of
 CC 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were
 CC prepared from total human RNAs or polyA+ RNAs derived from 30 different
 CC tissues. EST sequences usually correspond mainly to the 3' untranslated
 CC region (UTR) of the mRNA because they are often obtained from oligo-dT
 CC primed cDNA libraries. Such ESTs are not well suited for isolating cDNA
 CC sequences derived from the 5' ends of mRNAs and even in those cases where
 CC longer cDNA sequences have been obtained, the full 5' UTR is rarely
 CC included. 5' ESTs are derived from mRNAs with intact 5' ends and can
 CC therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs
 CC are also used in diagnostic, forensic, gene therapy and chromosome
 CC mapping procedures. They are used to obtain upstream regulatory sequences
 CC and to design expression and secretion vectors

 PT New isolated polynucleotide and encoded polypeptides, useful in
 PT diagnostics, forensics, gene mapping, identification of mutations
 PT responsible for genetic disorders or other traits and to assess
 PT biodiversity.
 XX
 PS Claim 20; SEQ ID NO 44156; 103pp; English.
 XX
 CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
 CC sequences. (I) is useful as hybridisation probes, polymerase chain
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
 CC and in recombinant production of (II). The polynucleotides are also used
 CC in diagnostics as expressed sequence tags for identifying expressed
 CC genes. (I) is useful in gene therapy techniques to restore normal
 CC activity of (II) or to treat disease states involving (II). (II) is
 CC useful for generating antibodies against it, detecting or quantitating a
 CC polypeptide in tissue, as molecular weight markers and as a food
 CC supplement. (II) and its binding partners are useful in medical imaging
 CC of sites expressing (II). (I) and (II) are useful for treating disorders
 CC involving aberrant protein expression or biological activity. The
 CC polypeptide and polynucleotide sequences have application in
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
 CC amino acid sequences of the invention. Note: The sequence data for this
 CC patent did not appear in the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

 XX Isolated nucleic acids and polypeptides, useful for preventing diagnosing
 PT and treating e.g. leukemia, inflammation and immune disorders.
 XX
 PS Claim 20; SEQ ID NO 26168; 1399pp + Sequence Listing; English.
 XX
 CC The invention relates to human polynucleotides (AAI79941-AAI93841) and
 CC the encoded proteins (AAO0010-AAO13910) that exhibit activity elating to
 CC cytokine, cell proliferation or cell differentiation or which may induce
 CC production of other cytokines in other cell populations. The
 CC polynucleotides and polypeptides are useful in gene therapy, vaccines or
 CC peptide therapy. The polypeptides have various cytokine-like activities,
 CC e.g. stem cell growth factor activity, haematopoiesis regulating
 CC activity, tissue growth factor activity, immunomodulatory activity and
 CC actvity/inhibin activity and may be useful in the diagnosis and/or
 CC treatment of cancer, leukaemia, nervous system disorders, arthritis and
 CC inflammation. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Isolated nucleic acids and polypeptides, useful for preventing diagnosing
 PT and treating e.g. leukemia, inflammation and immune disorders.

XX Claim 20; SEQ ID NO 24000; 1399pp + Sequence Listing; English.

XX The invention relates to human polynucleotides (AAI79941-AAI93841) and
 CC the encoded proteins (AAO0010-AAO13910) that exhibit activity elating to
 CC cytokine, cell proliferation or cell differentiation or which may induce

CC production of other cytokines in other cell populations. The
 CC polynucleotides and polypeptides are useful in gene therapy, vaccines or
 CC peptide therapy. The polypeptides have various cytokine-like activities,
 CC e.g. stem cell growth factor activity, haematopoiesis regulating
 CC activity, tissue growth factor activity, immunomodulatory activity and
 CC actvity/inhibin activity and may be useful in the diagnosis and/or
 CC treatment of cancer, leukaemia, nervous system disorders, arthritis and
 CC inflammation. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Novel gamma secretase protein, useful in the production of amyloids, is
 PT capable of cleaving beta-amyloid precursor protein to produce beta
 PT amyloid peptide.

XX Claim 83; Fig 3; 127pp; English.

XX The invention relates to the field of plaque amyloid deposits that are
 CC the hallmarks of Alzheimer's disease. In particular, the invention
 CC relates to an isolated, functionally-active protein that has gamma-
 CC secretase activity. Gamma-secretase activity is necessary for amyloid
 CC production. The present invention also relates to methods for isolating
 CC integral-membrane proteins and protein complexes, including the gamma-
 CC secretase protein of the invention. The method is useful for monitoring
 CC the cleavage of beta-amyloid precursor protein (betaAPP) by gamma-
 CC secretase. The present sequence is human recombinant betaAPP protein (C-
 CC 83)

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
XX
Claim 8; SEQ ID NO 13358; 2537pp + Sequence Listing; English.
XX
The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAH03166 to AAH05893 represent human amino acid sequences; and AAH13629 to AAH13632 represent polynucleotides, all of which are used in the exemplification of the present invention

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation.
XX
Claim 10; Page 1311; 2508pp; English.
XX
Sequences ABP31028-ABP35561 represent 4534 novel human proteins designated ORF (open reading frame) 1-4534, and sequences ABN75054-ABN79587 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polynucleotides or polypeptides, methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopoiesis regulation, tissue growth, angiogenesis, activin or inhibin activity, chemotactic/chemokinetic activity, haemostatic activity, thrombolytic activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity, and antiinfective activity, and may also be involved in the determination

 XX
 CC The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The CC polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic CC amino acid sequences of the invention. Note: The sequence data for this CC patent did not appear in the printed specification, but was obtained in CC electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences CC

XX PT Identifying a mitochondrial target for drug screening assays and for
XX PT treating diseases associated with altered mitochondrial function,
XX PT comprises detecting a modified polypeptide in a sample and correlating
XX PT with the disease.
XX PS Claim 1; SEQ ID NO 1782; 180pp; English.
XX CC This invention relates to novel mitochondrial targets that can be used
XX CC for therapeutic intervention in treating a disease associated with
XX CC altered mitochondrial function. Specifically, it refers to a method for
XX CC identifying proteins of the human heart mitochondrial proteome that are
XX CC useful for drug screening assays, as well as therapeutic targets. The
XX CC present invention describes a method for identifying such proteins that
XX CC can be used in the treatment of various diseases associated with altered
XX CC mitochondrial function including diabetes mellitus, Huntington's disease,
XX CC osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial
XX CC encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
XX CC ragged red fibre syndrome (MERRF) or cancer. Accordingly, these
XX CC compositions have neuroprotective, nontropic, antidiabetic,
XX CC anticonvulsant, antiarthritic, osteopathic, ophthalmological and
XX CC cytostatic activities. This polypeptide sequence is a human heart
XX CC mitochondrial protein of the invention.

 XX New genome of Legionella pneumophila Paris strain and derived
 PT polypeptides, useful for detection or identification of the strain and
 for treatment and prevention of infections.
 XX
 PS Claim 3; SEQ ID NO 2926; 660pp; English.
 XX
 CC The invention relates to an isolated or purified nucleotide sequences (I)
 from Legionella pneumophila Paris strain. (I), and their related
 CC sequences or fragments, are useful as primers and probes for detection
 CC and amplification, including differentiation between the Paris and
 CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
 CC (hybrid) polypeptides (II). (II) are also useful for preparation of
 CC specific antibodies (Ab), also used for detection/identification of
 CC Legionella, and some (I), specifically those involved in synthesis of
 CC surface proteins, are targets for identification of inhibitors. (II), or
 CC vectors that contain (I), are useful as vaccines and immunogenic
 CC compositions, for treatment and prevention of infections by L.
 CC pneumophila. The present sequence represents the amino acid sequence of a
 CC L. pneumophila protein.

XX Immunoassay method for membrane-bound matrix metalloprotease with

PT quantitation using its antibody, applicable in diagnosis of cancer and

PT cancer metastasis, and in drug development.

XX Disclosure; Fig 9; 93pp; Japanese.

XX The invention relates to a method for quantitative immunoassay of a

CC membrane-bound matrix metalloprotease (MT-MMP), involving using an

CC antibody against MT-MMP selected from groups containing MT-MMPs. The

CC method involves releasing and/or solubilising MT-MMP from a cell membrane

CC among a group of MT-MMPs by using a surfactant and reductant. Such a
 CC method is for detecting a membrane-bound matrix metalloprotease with
 CC quantitation, which is applicable in diagnosis of cancer and cancer
 CC metastasis as well as in drug development, and is also used to monitor
 CC progress of rheumatoid arthritis and Alzheimer's disease. This sequence
 CC represents a human MTL-MMP related protein

The method involves releasing and/or solubilising MT-MMP from a cell membrane among a group of MT-MMPs by using a surfactant and reductant. Such a method is for detecting a membrane-bound matrix metalloprotease with quantitation, which is applicable in diagnosis of cancer and cancer metastasis as well as in drug development, and is also used to monitor progress of rheumatoid arthritis and Alzheimer's disease. This sequence represents a mouse MT1-MMP related protein

XX Single nucleotide polymorphism sites in barley varieties and DNA sequences containing them for analysis and identification of barley varieties and production of barley transformants with desired characteristics.

XX Disclosure; SEQ ID XX; 284pp; Japanese.

XX The present invention relates to oligonucleotide clones originating in barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published-pct-sequences

XX A library of DNA fragments of Escherichia coli strains for the phylogenetic determination of a given strain comprises polynucleotides of nature B2/D+A-.

XX Example 6; Fig 6; 646pp; English.

XX

CC The invention relates to a library of DNA fragments of Escherichia coli
 CC strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and
 CC encoded proteins (AB852459-AB852919 and AB852954-AB853094) of nature
 CC B2/D-A-. The polynucleotides have potential antiinflammatory,
 CC antibacterial and immunosuppressive activity as part of pharmaceutical
 CC compositions used to treat, palliate or prevent extra-intestinal E. coli
 CC infections. The polypeptides are useful for determining the phylogenetic
 CC group of a given E. coli strain. These polypeptides can detect and treat
 CC an undesired development of E. coli, particularly an extra-intestinal
 CC infection that include systemic and non-diarrhoeal infections such as
 CC septicæmia, pyelonephritis and meningitis this is particularly
 CC advantageous as bacterial resistance is increasing with the more frequent
 CC use of broad spectrum antibiotics

XX PT New human molecules for disease detection and treatment (MDDT) and
 PT encoding polynucleotides, useful for diagnosing, preventing or treating
 PT diseases associated with aberrant MDDT expression, e.g. cancer, stroke,
 PT obesity or AIDS.
 XX

XX PS Claim 1; SEQ ID NO 47; 267pp; English.

XX CC The invention relates to human molecules useful for disease detection and
 CC treatment (MDDT) and also the polynucleotides which encode and identify
 CC and encode MDDT. The MDDT polypeptides and encoding polynucleotides have

CC the following activities: cytostatic, antiarteriosclerotic, anti-HIV,
 CC antiallergic, cerebroprotective, antiparkinsonian, anticonvulsant,
 CC nootropic, neuroprotective, antiinflammatory, ophthalmological,
 CC antithyroid, antiarthritic, antibacterial, virucide, protozoacide,
 CC antiparasitic, fungicide, anorectic, cardiant, hypotensive,
 CC antiinfertility, and hepatotropic. The MDDT polynucleotide may be used in
 CC gene therapy to treat disorders. The polypeptides and polynucleotides are
 CC useful in diagnosing, preventing or treating diseases or conditions
 CC associated with the decreased expression or overexpression of MDDT, such
 CC as autoimmune/inflammatory disorders (AIDS, allergies, atopic dermatitis,
 CC arthritis or thyroiditis), infections (e.g. bacterial, viral, parasitic,
 CC protozoal or fungal), metabolic disorders (e.g. obesity), reproductive
 CC disorders (e.g. infertility), neurological disorders (Parkinson's
 CC disease, Alzheimer's disease, stroke, epilepsy), cardiovascular disorders
 CC (e.g. myocardial infarction or hypertension), eye disorders, or cell
 CC proliferative diseases (e.g. cancer, atherosclerosis, hepatitis). These
 CC are also useful in assessing the effects of exogenous compounds on the
 CC expression of nucleic acid and amino acid sequences of MDDT. The MDDT or
 CC its fragments are useful in screening compounds for effectiveness as
 CC agonist or antagonist of the polypeptides, or in altering the expression
 CC of the target polynucleotide and compounds that specifically bind to or
 CC modulate the activity of the polypeptide. The microarray of the invention
 CC is useful in monitoring or measuring protein-protein interactions, drug-
 CC target interactions, and gene expression profiles. This sequence
 CC represents an MDDT polypeptide of the invention.

XX New isolated polypeptide and encoding nucleic acid derived from
 PT Staphylococcus epidermidis, useful for diagnosing, preventing and/or
 PT treating an S. epidermidis bacterial infection.

XX Claim 17; SEQ ID NO 7100; 741pp; English.

XX The invention describes an isolated nucleic acid comprising a nucleotide
 CC sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO:
 CC 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any
 CC of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as
 CC given in the specification. Also described are: a recombinant expression
 CC vector; a cell comprising a recombinant expression vector of (1);
 CC producing an S. epidermidis polypeptide; an isolated nucleic acid
 CC comprising a nucleotide sequence of at least 8 nucleotides in length; a
 CC vaccine composition for prevention or treatment of an S. epidermidis
 CC infection, comprising a nucleic acid cited above and a carrier; treating
 CC a subject for S. epidermidis infection; a recombinant or substantially
 CC pure preparation of an S. epidermidis polypeptide or its fragment; a
 CC vaccine composition for prevention or treatment of an S. epidermidis
 CC infection; detecting the presence of a Staphylococcus nucleic acid in a
 CC sample; a computer readable medium having recorded in it the nucleotide
 CC sequences with SEQ ID NO: 1-3772 or its fragments; a computer based
 CC system for identifying fragments of the Staphylococcus genome of
 CC commercial importance; a computer based system for identifying fragments
 CC of the Staphylococcus plasmids of commercial importance; identifying
 CC commercially important nucleic acid fragments of the Staphylococcus
 CC genome and/or plasmids; and identifying an expression modulating fragment
 CC of the Staphylococcus genome and/or plasmids. The methods and
 CC compositions of the present invention are useful for the diagnosis,
 CC prevention and/or treatment of an Staphylococcal epidermidis bacterial
 CC infection. This is the amino acid sequence of a S. epidermidis protein of
 CC the invention.

XX New caspase recruitment domain (CARD)-containing polypeptides and

PS Claim 9; Page 201-202; 216pp; English.

XX The invention relates to an isolated caspase recruitment domain (CARD) -
 containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain
 from it, and the polynucleotides encoding them. Also included are a
 recombinant vector comprising the polynucleotide, recombinant cells
 containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and
 insect cells) and an anti-CARD antibody. The CARD-containing polypeptide
 CC and CARD-encoding nucleic acid are useful for treating a pathology
 CC characterised by abnormal cell proliferation (e.g. cancer), abnormal cell
 CC death (apoptosis), autoimmune diseases or inflammation. In particular,
 CC the polypeptide and nucleic acid are useful for treating keratinocyte
 CC hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell
 CC proliferation in arteries following balloon angioplasty (restenosis),
 CC gliomas, carcinomas, sarcomas, melanomas, leukemias, allergies,
 CC arthritis, lupus, Schrogen's syndrome, Crohn's disease, graft-versus-host
 CC diseases, stroke, myocardial infarction, heart failure, neurodegenerative
 CC diseases (e.g. Parkinson's disease or Alzheimer's disease) or
 CC immunodeficiency associated disease (e.g. human immunodeficiency virus
 CC (HIV) infection). The nucleic acids are useful in a variety of diagnostic
 CC applications. The present sequence is a CARD domain containing protein

 XX New caspase recruitment domain (CARD)-containing polypeptides and
 XX encoding nucleic acids, useful for treating abnormal cell proliferation
 XX or cell death, autoimmune diseases or inflammation, e.g. carcinomas,
 XX arthritis or stroke.
 XX Claim 1; Page 85-86; 106pp; English.
 XX The invention relates to an isolated caspase recruitment domain (CARD)-
 XX containing polypeptide, or its CARD, NB-ARC, ANGIO-R, leucine rich repeat
 XX (LRR) or S-adenosyl methionine (SAM) domain, and its associated
 XX polynucleotide. The DNA is useful for altering the level of a biochemical
 XX process (including apoptosis, NF-kappaB induction, cytokine processing,
 XX cJun N-terminal kinase induction, caspase-mediated proteolysis,
 XX transcription, inflammation and cell adhesion) modulated by the DNA. The
 XX sequences are useful for treating a pathology characterised by abnormal
 XX cell proliferation, abnormal cell death or inflammation. The treatable
 XX diseases include cancer, keratinocyte hyperplasia, neoplasia, keloids,
 XX benign prostatic hypertrophy, inflammatory hyperplasia, fibrosis, smooth
 XX muscle cell proliferation in arteries following angioplasty, restenosis,
 XX autoimmune diseases including allergies, inflammatory diseases including
 XX arthritis, lupus, Sjogren's syndrome, Crohn's disease, ulcerative
 XX colitis, allograft rejection such as graft versus host disease, stroke,
 XX myocardial infarction, heart failure, neurodegenerative diseases such as
 XX Parkinson's disease and Alzheimer's disease and immunodeficiency
 XX associated diseases such as human immunodeficiency virus (HIV) infection.
 XX Sequences ABU81714-ABU81735 represent human CARD-containing polypeptides

 XX New nucleic acid encoding Monarch-1, CATERPILLER 11.2, CATERPILLER 11.3,
 XX CATERPILLER 16.1, CATERPILLER 16.2 or CIAS1 polypeptide, useful in
 XX preparing a composition for treating inflammatory disease or cancer.
 XX Example 1; Fig 3; 205pp; English.
 XX The invention relates to a novel isolated nucleic acid encoding a Monarch
 XX -1, CATERPILLER (CARD [caspase recruitment domain], transcription
 XX enhancer, R(purine)-binding, pyrin, lots of leucine repeats) 11.2,
 XX CATERPILLER 11.3, CATERPILLER 16.1, CATERPILLER 16.2 or CIAS1 (cold-
 XX induced autoinflammatory syndrome 1) polypeptide comprising the amino
 XX acids encoded by exon 6 and lacking the amino acids encoded by exon 4 or
 XX its fragment. The nucleic acid of the invention demonstrates
 XX antiinflammatory and cytostatic activities and may be useful in preparing
 XX a composition for treating an inflammatory disease or cancer, possibly
 XX via gene therapy. The current sequence is that of a human CATERPILLER
 XX nucleotide binding domain (NBD) protein of the invention.

XX
XX New recombinant DNA constructs useful in the field of biochemistry and
XX genetics, and in particular for producing transgenic plants with improved
XX biological characteristics.
XX
XX Claim 2; SEQ ID NO 8473; 14pp; English.
XX
XX The invention relates a recombinant DNA construct comprising a
XX polynucleotide having any of 5544 nucleotide sequences (CDNAS SEQ ID NO:
XX 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
XX (SEQ ID NO: 5545-11088). The CDNAS and proteins are from corn, soybean,
XX Arabidopsis, wheat and rape but the specification does not indicate which
XX sequences is derived from which organism. Also included is a method of
XX producing a plant having an improved property, comprising transforming a
XX plant with a recombinant DNA construct comprising a promoter region
XX functional in a plant cell operably joined to a polynucleotide encoding a
XX polypeptide associated with the property, and growing the transformed
XX plant. The property is selected from improving plant cold tolerance, for
XX manipulating growth rate in plant cells by modification of the cell cycle
XX pathway, for improving plant drought tolerance, for providing increased
XX resistance to plant disease, for galactomannan production, for production
XX of plant growth regulators, for improving plant heat tolerance, for
XX improving plant tolerance to herbicides, for increasing the rate of
XX homologous recombination in plants, for lignin production, for improving
XX plant tolerance to extreme osmotic conditions, for improving plant
XX tolerance to pathogens or pests, for yield improvement by modification of
XX photosynthesis, for modifying seed oil yield and/or content, for
XX modifying seed protein yield and/or content, for yield improvement by
XX modification of carbohydrate, nitrogen or phosphorus use and/or uptake
XX and for yield improvement by providing improved plant growth and
XX development under at least one stress condition. The polynucleotide may
XX also encode a plant transcription factor. The methods and compositions of
XX the present invention are useful in the field of biochemistry and
XX genetics, in particular for producing transgenic plants with improved
XX biological characteristics such as increased yield, improved nitrogen
XX flow, increasing plant tolerance to cold or heat, improving plant
XX tolerance to extreme osmotic and drought conditions, and improving plant
XX tolerance to plant pests or pathogens. They can also be used in physical
XX arrays of molecules, plant breeding markers, computer-based storage and
XX analysis systems. The present sequence is one of the 5544 plant protein
XX sequences of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification, but was obtained in
XX electronic format directly from USPTO at
XX seqdata.uspto.gov/sequence.html?docID=20040216190.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: Murein-degrading enzyme. May play a role in recycling of
CC muropeptides during cell elongation and/or cell division (By
CC similarity).

```

```

CC -!- CATALYTIC ACTIVITY: Cleavage of the beta-1,4-glycosidic bond
CC between N-acetylmuramic acid and N-acetylglucosamine residues,
CC thereby conserving the energy in a newly synthesized 1,6-
CC anhydrobond in the muramic acid residue.
CC -!- SUBCELLULAR LOCATION: In closeley related bacteria this protein is
CC attached to the outer membrane by a lipid anchor. This is
CC apparently not the case here.
CC -----
CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
CC the European Bioinformatics Institute. There are no restrictions on its
CC use as long as its content is in no way modified and this statement is not
CC removed.

CC -!- FUNCTION: DNA-dependent RNA polymerase catalyzes the transcription
CC of DNA into RNA using the four ribonucleoside triphosphates as
CC substrates.
CC -!- CATALYTIC ACTIVITY: Nucleoside triphosphate + RNA(n) = diphosphate
CC + RNA(n+1).
CC -!- SUBUNIT: In plastids the minimal PEP RNA polymerase catalytic core
CC is composed of four subunits: alpha, beta, beta', and beta''. When
CC a (nuclear-encoded) sigma factor is associated with the core the
CC holoenzyme is formed, which can initiate transcription (By
CC similarity).
CC -!- SUBCELLULAR LOCATION: Chloroplast.
CC -!- SIMILARITY: Belongs to the RNA polymerase beta' chain family.
CC RpoC1 subfamily.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 XX disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 XX which elicits production of antibodies to prevent fibrillogenesis and
 XX associated cellular toxicity.
 XX Disclosure; Page 11; 31pp; English.

CC The present sequence is that of an all-D peptide suitable for use in
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC CAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid

PT plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 21; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A-t-(A₁n₁k)-z-A₁l₁a₁b (I) where z = 0-1;
 CC A₁t = an amyloid targeting moiety; A₁n₁k = a linker moiety; and A₁l₁a₁b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC , and a kit for preparing a radiopharmaceutical preparation comprising
 CC (I), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), Kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 XX
 CC The invention relates to an amyloid-targeting imaging agent. The imaging
 CC agent comprises an amyloid targeting moiety (such as a peptide) joined to
 CC a labeling moiety via a linking moiety, and is preferably able to cross
 CC the blood-brain barrier. The invention also relates to a kit for
 CC preparing a radiopharmaceutical preparation from the imaging agent of the
 CC invention, a method for imaging amyloid deposition in a patient and a
 CC method for diagnosing an amyloid-related condition in a patient. The
 CC amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
 CC related conditions such as Creutzfeld-Jakob disease (CJD), Kuru,
 CC transmissible cerebral amyloidosis (also known as transmissible virus
 CC dementias), familial CJD, scrapie, transmissible mink encephalopathy,
 CC bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
 CC type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
 CC non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
 CC mediated diseases, dialysis-related amyloidosis, light chain-related
 CC amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
 CC patient. The agent does not exhibit excessive toxicity or irritation,
 CC does not induce an allergic response, and permits an earlier diagnosis of

CC amyloid-related conditions, thereby allowing earlier treatment and hence
 CC prevention of the undesirable effects of such disorders. Sequences
 CC ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
 CC the amyloid-targeting moiety in an imaging agent of the invention.

XX Identifying modulators of AMP-activated protein kinase-mediated
 PT activation of a nitric oxide synthase (NOS), for use in ischemic heart
 PT disease, comprises testing for the increase or decrease in
 PT phosphorylation of NOS.

XX Example 4; Fig 5; 41pp; English.

XX The present sequence is the calmodulin (CaM)-binding region of rat
 CC inducible nitric oxide synthase (iNOS). iNOS is one of three isoforms of
 CC the enzyme NOS, which synthesises nitric oxide from the amino acid L-
 CC arginine. The sequence is provided for comparison with endothelial nitric
 CC oxide synthase (eNOS). The threonine residue at position 495 of eNOS is
 CC phosphorylated by AMP-activated protein kinase (AMPK) in the absence of
 CC Ca2+-CaM. Phosphorylation results in inhibition of eNOS. In the presence
 CC of Ca2+-CaM, phosphorylation by AMPK occurs predominantly at Ser-1177 and
 CC eNOS is activated. Modulators which activate AMPK may be used in the
 CC treatment of ischaemic heart disease by promoting glucose and fatty acid
 CC metabolism, and improving nutrient and oxygen supply to the myocytes.
 CC They may also be used for the treatment of pulmonary hypertension and
 CC obstructive airways disease

XX Treating critical limb ischemia (CLI), or angiogenesis comprises
 PT administering to a patient a polynucleotide encoding a mammalian
 PT endothelial nitric oxide synthase (eNOS) polypeptide.

XX Example 1; SEQ ID NO 6; 82pp; English.

XX The invention describes a method of creating critical limb ischaemia
 CC (CLI) comprising administering to a patient a polynucleotide encoding a
 CC mammalian eNOS (endothelial nitric oxide synthase) polypeptide. Also
 CC described are: a method for treating angiogenesis by administering to a
 CC patient a polynucleotide encoding eNOS; and ameliorating microvascular
 CC dysfunction by administering to the patient the polynucleotide encoding
 CC the eNOS polypeptide. The method is useful for treating critical limb
 CC ischaemia or angiogenesis, or ameliorating a microvascular dysfunction.
 CC This is the amino acid sequence of a mouse inducible nitric synthase
 CC (iNOS) calmodulin binding domain peptide.

 XX XX New isolated endothelial nitric oxide synthase polypeptide mutant, useful
 PT for diagnosing or treating ischemia, atherosclerosis, hypertension,
 PT diabetes, Raynaud's phenomenon, poor wound healing, hyperlipidemia or
 PT obesity.
 XX XX

Example 1; SEQ ID NO 6; 57pp; English.

XX The present sequence represents the calmodulin-binding site of rat iNOS
 CC amino acid sequence. The present invention describes endothelial nitric
 CC oxide synthase (eNOS) mutants having one or more mutations in an amino
 CC acid sequence corresponding to a functional domain of a mammalian eNOS.
 CC At least one of the mutations is at a position corresponding to an amino
 CC acid residue in a calmodulin-binding domain that is phosphorylated in
 CC mammalian cells, and not an amino acid substitution to Ala or Asp. Also
 CC described: (1) an isolated eNOS polypeptide mutant that is substantially
 CC homologous, or has a 95-98% sequence identity to the amino acid sequence
 CC of the novel eNOS polypeptide mutant; (2) an isolated polynucleotide
 CC encoding the polypeptide mutant; (3) a recombinant vector comprising the
 CC polynucleotide operably linked to at least one regulatory sequence; (4) a
 CC pharmaceutical composition comprising the polypeptide mutant or the
 CC polynucleotide; (5) a binding partner of the polypeptide mutant; (6)
 CC modulating eNOS activity in a cell by administering to the cell the
 CC polypeptide mutant; (7) modulating eNOS activity in a cell by
 CC administering the polypeptide mutant or the polynucleotide to the cell,
 CC such that the polypeptide mutant is expressed in the cell; (8) diagnosing
 CC a condition associated with aberrant eNOS activity by contacting a cell
 CC of a patient with the polynucleotide, and detecting a level of eNOS
 CC activity indicative of the medical condition; and (9) prophylactic and
 CC therapeutic methods of treating a condition associated with aberrant eNOS
 CC activity by administering the polypeptide mutant or polynucleotide to the
 CC patient. The eNOS mutant has vasotropic, antiarteriosclerotic,
 CC hypotensive, antidiabetic, vulnary, antilipemic and anorectic
 CC activities, and has reduced calcium dependence and increased activity.
 CC The polypeptide mutant, polynucleotide and methods are useful for
 CC diagnosing or treating a condition associated with aberrant eNOS
 CC activity, e.g. ischaemia, atherosclerosis, hypertension, diabetes,
 CC Raynaud's phenomenon, poor wound healing, hyperlipidaemia or obesity.

 PT for screening for treatments for Alzheimers disease.
 PT
 XX Claim 13; SEQ ID NO 3; 89pp; Japanese.
 XX
 XX This invention relates to a novel modified amyloid beta precursor protein
 CC (APP) which contains a beta-selectase cleavage site and a modification
 CC which prevents cleavage by alpha-selectase. The invention may be useful
 CC for screening for, treating and preventing Alzheimer's disease and
 CC dementia. The present sequence is that of a protein which is related to
 CC the modified amyloid beta precursor proteins of the invention.

 PT
 XX Claim 2; Page 159-160; 234pp; English.
 PS
 XX This polypeptide comprises amino acid residues 445-518 of chicken mature
 CC matrix metalloproteinase 2 (chMMP-2, see AAW41111). It can be produced by

CC recombinant methods such as PCR amplification (see AAV12502) of chMMP-2
 CC coding sequence (see AAV03995) and cloning into e.g. pGEX-3X vector for
 CC expression in E. coli as a fusion protein with glutathione-S-transferase.
 CC The invention relates to the discovery that angiogenesis is mediated by
 CC the specific vitronectin receptor alpha-v beta-3, and that inhibition of
 CC alpha-v beta-3 function inhibits angiogenesis. Claimed antagonists of
 CC or chicken MMP-2, fusion polypeptides, cyclic or linear polypeptides (see
 CC also AAW41098-110), derivatised polypeptides, a monoclonal antibody or
 CC organic mimetic compound. The antagonists are used to inhibit
 CC angiogenesis in: inflamed tissue for treatment of arthritis or
 CC rheumatoid arthritis; solid tumours or metastases, particularly to induce
 CC tumour regression or inhibit growth of tumours; and in ocular disorders
 CC such as diabetic retinopathy or macular degeneration (all claimed). They
 CC can also be used to treat restenosis caused by migration of smooth muscle
 CC cells following angioplasty and to reduce blood supply to selected
 CC tissues (claimed). The new antagonists are highly selective for
 CC angiogenesis. Only new blood vessels express alpha-v beta-3, so mature
 CC vessels are unaffected, and the antagonists should be of low toxicity

XX Packaging material containing polypeptide antagonist of alphav, betas
 PT integrin - used for inhibition of angiogenesis, and for treating tumours,
 PT inflammation, eye diseases etc.

XX Claim 2; Page; 117pp; English.

XX Peptides AAW41228-33 are derived from the mature protein of human matrix
 CC metalloprotease-2 (MMP-2) (AAW41226). The present peptide is derived from
 CC amino acids 439-512. The peptides are able to act as alpha-v-beta-5
 CC antagonists. Alpha-v-beta-5 is a vitronectin receptor. Inhibitors of
 CC alpha-v-beta-5 can inhibit angiogenesis. The specification describes a
 CC novel labelled package that contains an inhibitor of angiogenesis i.e. an

CC alpha-v-beta-5 antagonising polypeptide that binds to integrin alpha-v-
 CC beta-5 and includes a part of the C-terminal domain of MMP-2. The
 CC antagonists are used to inhibit angiogenesis in inflamed tissue, in solid
 CC tumours or metastases, and in a wide range of ocular disorders (e.g.
 CC diabetic or other forms of retinopathy, neovascular glaucoma, or corneal
 CC transplants). They are particularly used to induce regression or to
 CC inhibit growth of tumours. The alpha-v-beta-5 antagonists can also be
 CC used to treat restenosis caused by migration of smooth muscle cells
 CC following angioplasty and to reduce blood supply to selected tissues. The
 CC antagonists particularly inhibit neovascularisation where this is induced
 CC by cytokines, e.g. transforming growth factor alpha, epidermal growth
 CC factor or especially vascular endothelial growth factor. note: this
 CC sequence does not appear in the specification; it was created using
 CC information provided

XX Administration of composition comprising organic peptidomimetic alpha-v
 CC beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue
 PT angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.

```

PS Example 2; Page; 184pp; English.
XX
CC The invention relates to a method of inhibiting angiogenesis in a tissue
CC by the administration of a composition comprising an organic
CC peptidomimetic antagonist of integrin alpha-V beta-3 (vitronectin
CC receptor). The integrin alpha-V beta-3 antagonist and compositions
CC containing it are useful for inhibiting angiogenesis in a variety of
CC medical conditions. The antagonist may be used to induce the regression
CC of solid tumours or solid tumour metastases; to inhibit the growth of
CC solid tumours undergoing neovascularisation; to treat inflamed tissue in
CC which neovascularisation is occurring (e.g., in rheumatoid arthritis); to
CC treat neovascularisation in retinal tissue (e.g., in diabetic
CC retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle
CC cell migration (such as that which occurs following angioplasty); and to
CC reduce the blood supply to a tissue required to support new growth of the
CC tissue. Sequences ADR05998-ADR06001 represent C-terminal (hemopexin
CC domain) fragments of chicken matrix metalloprotease 2 (MMP-2, gelatinase)
CC containing the amino acid substitutions Y517C and/or W551C which are
CC components of glutathione-S-transferase (GST)/MMP-2 fusion proteins used
CC in an example of the invention. Note: The present sequence is not shown
CC in the specification, but was derived from the wild-type chicken MMP-2 C-
CC terminal fragment ADR05971 and the information given on page 49.

XX Claim 2; Page; 117pp; English.

XX Peptides AAW41228-33 are derived from the mature protein of human matrix
 CC metalloprotease-2 (MMP-2) (AAW41226). The present peptide is derived from
 CC amino acids 439-546. The peptides are able to act as alpha-v-beta-5
 CC antagonists. Alpha-v-beta-5 is a vitronectin receptor. Inhibitors of
 CC alpha-v-beta-5 can inhibit angiogenesis. The specification describes a
 CC novel labelled package that contains an inhibitor of angiogenesis i.e. an
 CC alpha-v-beta-5 antagonising polypeptide that binds to integrin alpha-v-
 CC beta-5 and includes a part of the C-terminal domain of MMP-2. The
 CC antagonists are used to inhibit angiogenesis in inflamed tissue, in solid

CC tumours or metastases, and in a wide range of ocular disorders (e.g.
 CC diabetic or other forms of retinopathy, neovascular glaucoma, or corneal
 CC transplants). They are particularly used to induce regression or to
 CC inhibit growth of tumours. The alpha-v-beta-5 antagonists can also be
 CC used to treat restenosis caused by migration of smooth muscle cells
 CC following angioplasty and to reduce blood supply to selected tissues. The
 CC antagonists particularly inhibit neovascularisation where this is induced
 CC by cytokines, e.g. transforming growth factor alpha, epidermal growth
 CC factor or especially vascular endothelial growth factor. note: this
 CC sequence does not appear in the specification; it was created using
 CC information provided

XX PT Administration of composition comprising organic peptidomimetic alpha-v
 beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue
 PT angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.

XX PS Example 1A; SEQ ID NO 26; 184pp; English.

XX CC The invention relates to a method of inhibiting angiogenesis in a tissue
 CC by the administration of a composition comprising an organic
 CC peptidomimetic antagonist of integrin alpha-v beta-3 (vitronectin
 CC receptor). The integrin alpha-v beta-3 antagonist and compositions
 CC containing it are useful for inhibiting angiogenesis in a variety of
 CC medical conditions. The antagonist may be used to induce the regression
 CC of solid tumours or solid tumour metastases; to inhibit the growth of
 CC solid tumours undergoing neovascularisation; to treat inflamed tissue in
 CC which neovascularisation is occurring (e.g., in rheumatoid arthritis); to
 CC treat restenosis in a tissue by inhibiting angiogenesis (e.g., in diabetic
 CC retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle
 CC cell migration (such as that which occurs following angioplasty); and to

CC reduce the blood supply to a tissue required to support new growth of the
 CC tissue. Sequences ADT05963-ADT05974 represent C-terminal (hemopexin
 CC domain) fragments of human and chicken matrix metalloprotease 2 (MMP-2,
 CC gelatinase) used in an example of the invention in assays of inhibition
 CC of integrin alpha-v beta-3-mediated cell attachment and of ligand-
 CC receptor binding.

XX PS Claim 2; Page 158-159; 234pp; English.

XX CC This polypeptide comprises amino acid residues 445-637 of chicken mature
 CC matrix metalloproteinase 2 (chMMP-2, see AAW41111). It can be produced by
 CC recombinant methods such as PCR amplification (see AAV12502) of chMMP-2
 CC coding sequence (see AAV03995) and cloning into e.g. PGEX-3X vector for
 CC expression in E. coli as a fusion protein with glutathione-S-transferase.
 CC The invention relates to the discovery that angiogenesis is mediated by
 CC the specific vitronectin receptor alpha-v beta-3, and that inhibition of
 CC alpha-v beta-3 function inhibits angiogenesis. Claimed antagonists of
 CC alpha-v beta-3 comprise C-terminal fragments (see AAW41083-94) of human
 CC or chicken MMP-2, fusion polypeptides, cyclic or linear polypeptides (see
 CC also AAW41098-110), derivatised polypeptides, a monoclonal antibody or
 CC organic mimetic compound. The antagonists are used to inhibit
 CC angiogenesis in: inflamed tissue for treatment of arthritis or
 CC rheumatoid arthritis; solid tumours or metastases, particularly to induce
 CC tumour regression or inhibit growth of tumours; and in ocular disorders

CC such as diabetic retinopathy or macular degeneration (all claimed). They
 CC can also be used to treat restenosis caused by migration of smooth muscle
 CC cells following angioplasty and to reduce blood supply to selected
 CC tissues (claimed). The new antagonists are highly selective for
 CC angiogenesis. Only new blood vessels express alpha-v beta-3, so mature
 CC vessels are unaffected, and the antagonists should be of low toxicity

 CC alpha-v-beta-5 can inhibit angiogenesis. The specification describes a
 CC novel labelled package that contains an inhibitor of angiogenesis i.e. an
 CC alpha-v-beta-5 antagonising polypeptide that binds to integrin alpha-v-
 CC beta-5 and includes a part of the C-terminal domain of MMP-2. The
 CC antagonists are used to inhibit angiogenesis in inflamed tissue, in solid
 CC tumours or metastases, and in a wide range of ocular disorders (e.g.
 CC diabetic or other forms of retinopathy, neovascular glaucoma, or corneal
 CC transplants). They are particularly used to induce regression or to
 CC inhibit growth of tumours. The alpha-v-beta-5 antagonists can also be
 CC used to treat restenosis caused by migration of smooth muscle cells
 CC following angioplasty and to reduce blood supply to selected tissues. The
 CC antagonists particularly inhibit neovascularisation where this is induced
 CC by cytokines, e.g. transforming growth factor alpha, epidermal growth
 CC factor or especially vascular endothelial growth factor. note: this
 CC sequence does not appear in the specification; it was created using

XX CC Administration of composition comprising organic peptidomimetic alpha-v

XX CC beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue

XX CC angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.

XX PS Example 1A; SEQ ID NO 18; 184pp; English.

XX CC The invention relates to a method of inhibiting angiogenesis in a tissue

XX CC by the administration of a composition comprising an organic

XX CC peptidomimetic antagonist of integrin alpha-V beta-3 (vitronectin

XX CC receptor). The integrin alpha-V beta-3 antagonist and compositions

XX CC containing it are useful for inhibiting angiogenesis in a variety of

XX CC medical conditions. The antagonist may be used to inhibit the regression

XX CC of solid tumours or solid tumour metastases; to inhibit the growth of

XX CC solid tumours undergoing neovascularisation; to treat inflamed tissue in

XX CC which neovascularisation is occurring (e.g., in rheumatoid arthritis); to

XX CC treat neovascularisation in retinal tissue (e.g., in diabetic

XX CC retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle

XX CC cell migration (such as that which occurs following angioplasty); and to

XX CC reduce the blood supply to a tissue required to support new growth of the

XX CC tissue. Sequences ADT05963-ADT05974 represent C-terminal (hemopexin

XX CC domain) fragments of human and chicken matrix metalloprotease 2 (MMP-2,

XX CC gelatinase) used in an example of the invention in assays of inhibition

XX CC of integrin alpha-V beta-3-mediated cell attachment and of ligand-

XX CC receptor binding.

PT Packaging material containing polypeptide antagonist of alphav, beta5
PT integrin - used for inhibition of angiogenesis, and for treating tumours,
PT inflammation, eye diseases etc.

PS Claim 2; Page; 117pp; English.

CC Peptides AAW41228-33 are derived from the mature protein of human matrix
CC metalloprotease-2 (MMP-2) (AAW41226). The present peptide is derived from
CC amino acids 410-631. The peptides are able to act as alpha-v-beta-5
CC antagonists. Alpha-v-beta-5 is a vitronectin receptor. Inhibitors of
CC alpha-v-beta-5 can inhibit angiogenesis. The specification describes a
CC novel labelled package that contains an inhibitor of angiogenesis i.e. an
CC alpha-v-beta-5 antagonising polypeptide that binds to integrin alpha-v-
CC beta-5 and includes a part of the C-terminal domain of MMP-2. The
CC antagonists are used to inhibit angiogenesis in inflamed tissue, in solid
CC tumours or metastases, and in a wide range of ocular disorders (e.g.
CC diabetic or other forms of retinopathy, neovascular glaucoma, or corneal
CC transplants). They are particularly used to induce regression or to
CC inhibit growth of tumours. The alpha-v-beta-5 antagonists can also be
CC used to treat restenosis caused by migration of smooth muscle cells
CC following angioplasty and to reduce blood supply to selected tissues. The
CC antagonists particularly inhibit neovascularisation where this is induced
CC by cytokines, e.g. transforming growth factor alpha, epidermal growth
CC factor or especially vascular endothelial growth factor. note: this
CC sequence does not appear in the specification; it was created using
CC information provided

PT Administration of composition comprising organic peptidomimetic alpha-v
PT beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue
PT angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.
XX Example 1A; SEQ ID NO 17; 184pp; English.

CC The invention relates to a method of inhibiting angiogenesis in a tissue
CC by the administration of a composition comprising an organic
CC peptidomimetic antagonist of integrin alpha-V beta-3 (vitronectin
CC receptor). The integrin alpha-V beta-3 antagonist and compositions
CC containing it are useful for inhibiting angiogenesis in a variety of
CC medical conditions. The antagonist may be used to induce the regression
CC of solid tumours or solid tumour metastases; to inhibit the growth of
CC solid tumours undergoing neovascularisation; to treat inflamed tissue in
CC which neovascularisation is occurring (e.g., in rheumatoid arthritis); to
CC treat neovascularisation in retinal tissue (e.g., in diabetic
CC retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle
CC cell migration (such as that which occurs following angioplasty); and to
CC reduce the blood supply to a tissue required to support new growth of the
CC tissue. Sequences ADT05963-ADT05974 represent C-terminal (hemopexin
CC domain) fragments of human and chicken matrix metalloprotease 2 (MMP-2,
CC gelatinase) used in an example of the invention in assays of inhibition
CC of integrin alpha-V beta-3-mediated cell attachment and of ligand-
CC receptor binding.

XX
PS Claim 2; Page 157-158; 234pp; English.
XX
CC This polypeptide comprises amino acid residues 410-637 of chicken mature
CC matrix metalloproteinase 2 (chMMP-2, see AAW41111). It can be produced by
CC recombinant methods such as PCR amplification (see AAV12501) of chMMP-2
CC coding sequence (see AAV03995) and cloning into e.g. pGEX-3X vector for
CC expression in E. coli as a fusion protein with glutathione-S-transferase.
CC The invention relates to the discovery that angiogenesis is mediated by
CC the specific vitronectin receptor alpha-v beta-3, and that inhibition of
CC alpha-v beta-3 function inhibits angiogenesis. Claimed antagonists of
CC alpha-v beta-3 comprise C-terminal fragments (see AAW41083-94) of human
CC or chicken MMP-2, fusion polypeptides, cyclic or linear polypeptides (see
CC also AAW41098-110), derivatised polypeptides, a monoclonal antibody or
CC organic mimetic compound. The antagonists are used to inhibit
CC angiogenesis in: inflamed tissue for treatment of arthritis or
CC rheumatoid arthritis; solid tumours or metastases, particularly to induce
CC tumour regression or inhibit growth of tumours; and in ocular disorders
CC such as diabetic retinopathy or macular degeneration (all claimed). They
CC can also be used to treat restenosis caused by migration of smooth muscle
CC cells following angioplasty and to reduce blood supply to selected
CC tissues (claimed). The new antagonists are highly selective for
CC angiogenesis. Only new blood vessels express alpha-v beta-3, so mature
CC vessels are unaffected, and the antagonists should be of low toxicity

CC This polypeptide comprises amino acid residues 203-631 of human mature
CC matrix metalloproteinase 2 (hMMP-2). It was produced by recombinant
CC methods involving PCR amplification (see AAV12509) of hMMP-2 coding
CC sequence and cloning into e.g. pGEX-lambda vector for expression in E.
CC coli as a glutathione-S-transferase fusion protein. The invention relates
CC to the discovery that angiogenesis is mediated by the specific
CC vitronectin receptor alpha-v beta-3, and that inhibition of alpha-v beta-
CC 3 function inhibits angiogenesis. Claimed antagonists of alpha-v beta-
CC 2, fusion polypeptides, cyclic or linear polypeptides (see also AAW41098-
CC 110), derivatised polypeptides, a monoclonal antibody or organic mimetic
CC compound. The antagonists are used to inhibit angiogenesis in: inflamed
CC tissue for treatment of arthritis or rheumatoid arthritis; solid tumours
CC or metastases, particularly to induce tumour regression or inhibit growth
CC of tumours; and in ocular disorders such as diabetic retinopathy or
CC macular degeneration (all claimed). They can also be used to treat
CC restenosis caused by migration of smooth muscle cells following
CC angioplasty and to reduce blood supply to selected tissues (claimed). The
CC new antagonists are highly selective for angiogenesis. Only new blood
CC vessels express alpha-v beta-3, so mature vessels are unaffected, and the
CC antagonists should be of low toxicity

XX
CC Administration of composition comprising organic peptidomimetic alpha-v
PT beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue
PT angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.
XX
PS Example 2; SEQ ID NO 45; 184pp; English.
XX
CC The invention relates to a method of inhibiting angiogenesis in a tissue
CC by the administration of a composition comprising an organic
CC peptidomimetic antagonist of integrin alpha-v beta-3 (vitronectin
CC receptor). The integrin alpha-v beta-3 antagonist and compositions
CC containing it are useful for inhibiting angiogenesis in a variety of
CC medical conditions. The antagonist may be used to induce the regression
CC of solid tumours or solid tumour metastases; to inhibit the growth of
CC solid tumours undergoing neovascularisation; to treat inflamed tissue in
CC which neovascularisation is occurring (e.g., in rheumatoid arthritis); to
CC treat neovascularisation in retinal tissue (e.g., in diabetic
CC retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle
CC cell migration (such as that which occurs following angioplasty); and to
CC reduce the blood supply to a tissue required to support new growth of the
CC tissue. The present sequence represents residues 203-631 of human MMP-2
CC which is a component of a glutathione-S-transferase (GST)/MMP-2 fusion
CC protein produced in an example of the invention.

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.

XX PS Claim 20; SEQ ID NO 54360; 103pp; English.

XX CC The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridization probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activities. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.

XX Claim 27; Page; 190pp; English.

XX CC The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

New type-IV collagenase peptide fragments - used for metallo-proteinase
 detection and inhibition and for producing antibodies for enzyme
 detection.

Disclosure; Fig 1; -pp; English.

XX Type IV procollagenase was purified from human A2058 melanoma cells. The
 CC complete amino acid sequence was determined (see also Hoyhtya, M. et al,
 CC (1988) FEBS Letters 233, 109-113). Based on this sequence, peptides were
 CC synthesised (see features) having homology with a histidine contg. domain
 CC at residues 371-386, a cysteine contg. domain at residues 200-370, the 80
 CC residue amino terminus or a region 159 residues from the carboxy
 CC terminus. These regions correspond to the domain of the enzyme involved
 CC in enzyme activation and interaction of the enzyme with the substrate.
 CC The peptides are useful in metalloproteinase detection and inhibition.
 CC They can be used in the treatment of inappropriate angiogenesis,
 CC arthritis, tumour growth, invasion and metastasis and granulomatous
 CC inflammatory conditions such as sarcoidosis. The peptides can be used to
 CC produce antibodies. Peptide 6, at concn. of 0.1 mM inhibited 80% of the
 CC enzyme activity. See also US7494796-A and WO9010228. (Note: Revised entry
 CC submitted to correct the patent number format of US Government-owned NTIS
 CC applications to prevent clashes with ongoing US granted patent numbers.

XX PT Packaging material containing polypeptide antagonist of alphav, beta5
XX integrin - used for inhibition of angiogenesis, and for treating tumours,
XX inflammation, eye diseases etc.
XX PS Disclosure; Fig 16; 117pp; English.
XX CC The present sequence represents the mature protein of human matrix
XX metalloprotease-2 (MMP-2). Fragments of this protein (AAW41228-33) are
XX able to act as alpha-v-beta-5 antagonists. Alpha-v-beta-5 is a
XX vitronectin receptor. Inhibitors of alpha-v-beta-5 can inhibit
XX angiogenesis. The specification describes a novel labelled package that
XX contains an inhibitor of angiogenesis i.e. an alpha-v-beta-5 antagonising
XX polypeptide that binds to integrin alpha-v-beta-5 and includes a part of
XX the C-terminal domain of MMP. The antagonists are used to inhibit
XX angiogenesis in inflamed tissue, in solid tumours or metastases, and in a
XX wide range of ocular disorders (e.g. diabetic or other forms of
XX retinopathy, neovascular glaucoma, or corneal transplants). They are
XX particularly used to induce regression or to inhibit growth of tumours.
XX The alpha-v-beta-5 antagonists can also be used to treat restenosis
XX caused by migration of smooth muscle cells following angioplasty and to
XX reduce blood supply to selected tissues. The antagonists particularly
XX inhibit neovascularisation where this is induced by cytokines, e.g.
XX transforming growth factor alpha, epidermal growth factor or especially
XX vascular endothelial growth factor

 XX
 XX Administration of composition comprising organic peptidomimetic alpha-v
 PT beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue
 PT angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.
 XX
 XX Example 2; Fig 7A-C; 184pp; English.
 XX
 XX The invention relates to a method of inhibiting angiogenesis in a tissue
 CC by the administration of a composition comprising an organic
 CC peptidomimetic antagonist of integrin alpha-v beta-3 (vitronectin
 CC receptor). The integrin alpha-v beta-3 antagonist and compositions
 CC containing it are useful for inhibiting angiogenesis in a variety of
 CC medical conditions. The antagonist may be used to induce the regression
 CC of solid tumours or solid tumour metastases; to inhibit the growth of
 CC solid tumours undergoing neovascularisation; to treat inflamed tissue in
 CC treat neovascularisation is occurring (e.g., in rheumatoid arthritis); to
 CC treat neovascularisation in retinal tissue (e.g., in diabetic
 CC retinopathy); to treat stenosis in a tissue by inhibiting smooth muscle
 CC cell migration (such as that which occurs following angioplasty); and to
 CC reduce the blood supply to a tissue required to support new growth of the
 CC tissue. The present sequence represents mouse mature matrix
 CC metalloprotease 2 (MMP-2, gelatinase) used in an example of the
 CC invention.

 XX Polypeptide for the treatment of pain and the reduction of tissue damage
 PT comprises an inhibitor of human matrix metalloprotease.
 PT
 XX Claim 1; Fig 2; 61pp; English.
 XX
 XX The present sequence is that of human matrix metalloprotease-2 (MMP-2),
 CC previously known as 72 kDa gelatinase and gelatinase A. MMP-2 is capable
 CC of degrading the extracellular matrix components of the basement
 CC membrane. The invention relates to methods for treating pain in a patient
 CC by administering a dual inhibitor of MMP-2 and MMP-9 (see AAB20491). The
 CC administration of an inhibitor of MMP-2 is useful for treating nerve
 CC tissue damage (claimed), where the patient is suffering from a disease or
 CC disorder selected from stroke, haemorrhage, reperfusion injury, cerebral
 CC ischaemia and cerebral infarction (claimed). The method is useful for
 CC treating a disease, disorder or nerve tissue damage selected from
 CC enhanced or exaggerated sensitivity to acute pain, burn pain, atypical
 CC facial pain, neuropathic pain, back pain, complex regional pain syndrome
 CC I and II, arthritic pain, sports injury pain, pain related to virus
 CC infection, post-herpetic neuralgia, phantom limb pain, labour pain,
 CC cancer pain, post-chemotherapy pain, post-operative pain, post-stroke
 CC pain, physiological pain, inflammatory pain, acute inflammatory
 CC conditions/visceral pain, neuralgia, painful diabetic retinopathy,
 CC traumatic nerve injury, and tolerance to narcotics or withdrawal from
 CC narcotics (claimed). MMP-2 polypeptides can also be used to screen for
 CC agonist or antagonist (inhibitor) compounds

 XX Composition for the treatment of damaged tissue i.e. chronic wounds and
 PT dermal ulcers comprises an inhibitor agent i.e. a protease and a growth
 PT factor.

XX PS Disclosure; Page 552; 572pp; English.
 XX The specification describes a pharmaceutical composition, comprising a
 CC growth factor, an inhibitor agent, i.e. a protease. The inhibitor agent
 CC inhibits the action of at least one specific adverse protein, i.e. a
 CC protease, that is upregulated in a damaged tissue such as a wound
 CC environment. Growth factors which are included in the composition of the
 CC invention are platelet-derived growth factor (PDGF), fibroblast growth
 CC factor (FGF), connective tissue derived growth factor (CTGF),
 CC keratinocyte-derived growth factor (KGF), transforming growth factor-beta
 CC (TGF-beta), granulocyte macrophage colony stimulating factor (GM-CSF),
 CC epidermal growth factor (EGF), vascular endothelial growth factor (VEGF),
 CC and chrysalin. Inhibitors which are included in the composition of the
 CC invention include inhibitors of urokinase-type plasminogen activator
 CC (uPA) and matrix metalloproteinase (MMP). The composition is useful for
 CC the treatment of chronic damaged tissue, i.e. wounds and dermal ulcers.
 CC The present sequence represents a human MMP-2, and is used to produce the
 CC composition of the invention

 PS
 CC The invention relates to an isolated molecule comprising an antibody
 CC variable region which specifically binds to an extracellular domain of a
 CC tumour endothelial marker (TEM) protein selected from ABB90732, ABB90740,
 CC ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM
 CC proteins have cytostatic, immunostimulant and antiangiogenic activity.
 CC They are useful for inhibiting tumour growth, neoangiogenesis in subjects
 CC bearing a vascularised tumour, polycystic kidney disease, diabetic
 CC retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM
 CC genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789)
 CC are disclosed, as are marker oligonucleotide sequences: tumour
 CC endothelial markers (TEM) ABL91996-ABL92041 and ABL92143-ABL92191; normal
 CC endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers

 PT Diagnosing breast cancer comprises determining expression of nucleic acid
 PT molecules or expression products that are differentially expressed in

PT normal and malignant tissue.
 XX
 PS Claim 37; Page 185-187; 219pp; English.
 XX
 CC The present invention relates to a method for diagnosing breast cancer in
 CC a subject suspected of having endometrial cancer. The method comprises
 CC determining the expression of a set of human genes or expression products
 CC in an endometrial sample suspected of being cancerous. The human genes of
 CC the invention are differentially expressed in breast tumours
 CC characterised as high or low MAI (mitotic activity index). These sets of
 CC genes can be used to discriminate between high and low MAI breast
 CC tumours. The invention also provides DNA and protein microarrays for
 CC analysing the expression of the human genes and their protein products.
 CC The methods and arrays are useful for the diagnosis and prognosis of
 CC endometrial cancer, selecting and monitoring treatment regimes, and
 CC identification of compounds useful for the treatment of endometrial
 CC cancer. AAU84311-AAU84361 represent the human proteins of the invention
 CC that are differentially expressed in breast cancer tissue

 PS Anti-angiogenic composition comprising peptide inhibitor of matrix
 FT metalloproteinase, useful for decreasing the expression of vascular
 PT endothelial growth factor and treating cancers and tissue injuries.
 XX
 PS Example 1; Page 43-44; 103pp; English.
 XX
 CC The present invention describes an anti-angiogenic composition (I) for
 CC inhibiting expression of vascular endothelial growth factor (VEGF). (I)
 CC comprises an effective amount of a peptide inhibitor of matrix
 CC metalloproteinase (MMP), where the peptide can inhibit the expression of
 CC VEGF. (I) has cytostatic, vulnary, cardiac, cerebroprotective,
 CC antidiabetic, ophthalmological and dermatological activities. (I) can be
 CC used for inhibiting expression of VEGF, and so can be used for inhibiting
 CC growth of tumours and diminishing tumours size. The tumour can be

CC metastatic, non-metastatic, vascularised, non-vascularised, hard or soft.
 CC (I) is also useful for treating injuries including wounds, surgical
 CC incisions, chronic wounds, heart diseases and stroke. (I) is also useful
 CC for treating disorders characterised by excessive angiogenesis e.g.
 CC macular degeneration and diabetic retinopathy. The present sequence
 CC represents the human MMP-2 protein, which is used in the exemplification

 PT Novel crystalline form of a polypeptide corresponding to the catalytic
 FT domain of matrix metalloproteinase 9 protein, useful for selecting or
 PT designing chemical modulators which are used for treating diabetes,
 PT cancer, arthritis.
 XX
 PS Disclosure; Fig 7; 227pp; English.
 XX
 CC The invention comprises a crystalline form of a polypeptide corresponding
 CC to the catalytic domain of matrix metalloproteinase 9 (MMP9) protein - a
 CC gelatinase. The crystalline polypeptide of the invention is useful for
 CC treating a metalloproteinase mediated disease or condition in a warm-
 CC blooded animal. The crystalline polypeptide is also useful for
 CC determining the three-dimensional structure of the MMP9 catalytic domain
 CC to high resolution. The three-dimensional structure of the MMP9 catalytic
 CC domain is useful for rational drug design, and the atomic coordinates of
 CC the catalytic domain of MMP9 are useful for selecting or designing
 CC chemical modulators (preferably inhibitors) of MMP9. The crystalline
 CC polypeptide of the invention is useful in the treatment of a
 CC metalloproteinase mediated disease or condition, such as: tumour growth;
 CC metastasis in cancer; arthritis; osteoarthritis; atherosclerosis;

CC rectoriosis; periodontitis; multiple sclerosis; glomerulonephritis; graft-versus-host disease; and non-insulin dependent diabetes. The present amino acid sequence represents a human matrix metalloproteinase 2 (MMP2) protein

XX CC This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antiinflammatory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for diagnosing or treating a hypoxia-regulated condition, such as tumorigenesis, angiogenesis, apoptosis, inflammation, erythropoiesis, or the biological response to hypoxia conditions including processes such as glycolysis, gluconeogenesis, glucose transport, catecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein of the invention.

Listing first 300 summaries

Database : UniProt 05.80.*
1: uniprot_sprot.*
2: uniprot_trembl.*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -1- CATALYTIC ACTIVITY: Hydroxylation of N-alkanes at the terminal
CC position.
CC -1- CATALYTIC ACTIVITY: Obtusifolios + 3 O(2) + 3 NADPH = 4-alpha-
CC methyl-5-alpha-ergosta-8,14,24(28)-trien-3-beta-ol + formate + 3
CC NADP(+) + 3 H(2)O.
CC -1- SIMILARITY: Belongs to the cytochrome P450 family.

 CC -1- FUNCTION: RuBisCO catalyzes two reactions: the carboxylation of D-
 CC ribulose 1,5-bisphosphate, the primary event in photosynthetic
 CC carbon dioxide fixation, as well as the oxidative fragmentation of
 CC the pentose substrate in the photorespiration process. Both
 CC reactions occur simultaneously and in competition at the same
 CC active site.
 CC -1- CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + CO(2) + H(2)O =
 CC 2 3-phospho-D-glycerate + 2 H(+).
 CC -1- CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + O(2) = 3-
 CC phospho-D-glycerate + 2-phosphoglycolate.
 CC -1- COPACTOR: Binds 1 magnesium ion per subunit (By similarity).
 CC -1- SUBUNIT: Heterohexameric of 8 large chains and 8 small chains;
 CC disulfide-linked. The disulfide link is formed within the large
 CC subunit homodimers (By similarity).
 CC -1- SUBCELLULAR LOCATION: Chloroplast.
 CC -1- DOMAIN: The basic functional RuBisCO is composed of a large chain
 CC homodimer in a "head-to-tail" conformation. In form I RuBisCO this
 CC homodimer is arranged in a barrel-like tetramer with the small
 CC subunits forming a tetrameric "cap" on each end of the "barrel"
 CC (By similarity).
 CC -1- PTM: The disulfide bond which can form in the large chain dimeric
 CC partners within the hexadecamer appears to be associated with
 CC oxidative stress and protein turnover (By similarity).
 CC -1- SIMILARITY: Belongs to the RuBisCO large chain family. Type I
 CC subfamily.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 CC -I- FUNCTION: Produces nitric oxide (NO) which is a messenger molecule
 CC with diverse functions throughout the body. In macrophages, NO
 CC mediates tumoricidal and bactericidal actions.
 CC -I- CATALYTIC ACTIVITY: L-arginine + n NADPH + m O(2) = citrulline +
 CC nitric oxide + n NADP(+).
 CC -I- COFACTOR: Heme.
 CC -I- COFACTOR: FAD. Binds 1 mole of FAD.
 CC -I- COFACTOR: FMN. Binds 1 mole of FMN.
 CC -I- COFACTOR: Tetrahydrobiopterin (BH4). May stabilize the dimeric
 CC form of the enzyme.
 CC -I- ENZYME REGULATION: Not stimulated by calcium/calmodulin. Aspirin
 CC inhibits expression and function of this enzyme and effects may be
 CC exerted at the level of translational/posttranslational
 CC modification and directly on the catalytic activity.
 CC -I- SUBUNIT: Homodimer. Binds SLC9A3R1 (By similarity).
 CC -I- TISSUE SPECIFICITY: Macrophages.
 CC -I- INDUCTION: By treatment with endotoxins or cytokines.
 CC -I- SIMILARITY: Belongs to the NOS family.
 CC -I- SIMILARITY: Contains 1 flavodoxin-like domain.

CC -|- FUNCTION: Converts molybdopterine precursor Z into molybdopterine.
CC This requires the incorporation of two sulfur atoms into precursor
CC Z to generate a dithiolene group. The sulfur atoms are provided by
CC the active form of the small subunit, whose activation involves
CC the acquisition of sulfur and the activity of moeB/chlN.
CC -|- PATHWAY: Molybdenum cofactor biosynthesis.
CC -|- SUBUNIT: Heterodimer of 2 moad subunits and 2 moeB subunits.
CC -|- INTERACTION:
CC P30749:moae; NbExp=1; IntAct=EBI-554366, EBI-554376;
CC POA7K2:rpIL; NbExp=1; IntAct=EBI-554366, EBI-543702;
CC -|- INDUCTION: By anaerobiosis, repressed by the molybdenum cofactor.
CC -|- MASS SPECTROMETRY: MW=8773.6; MW_ERR=0.2; METHOD=Electrospray;
CC RANGE=1-81; NOTE=Ref. 4.
CC -|- SIMILARITY: Belongs to the moad family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 PT associated cellular toxicity.
 XX Disclosure; Page 11; 31pp; English.
 PS The present sequence is that of an all-D peptide suitable for use for
 CC preparing vaccines for preventing or treating Alzheimer's disease and

CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self',
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

DR New amyloid-targeting imaging agents useful for in vivo imaging amyloid
 FT plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 21; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A₁-_n-_k-_z-A₁-_a-_b (1) where z = 0 - 1;
 CC A₁ = an amyloid targeting moiety; A₁-_n-_k = a linker moiety; and A₁-_a-_b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (I), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 XX XX Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's
 PT disease comprises contacting blood vessel wall cell with amyloid-beta 40
 PT inhibitor.
 XX XX Disclosure; Page 10; 68pp; English.
 XX XX The present invention relates to a new method of inhibiting cerebral
 CC amyloid angiopathy. The new method of the invention involves contacting a
 CC blood vessel wall cell with an amyloid-beta40 inhibitor. The invention
 CC can be used for treating disease states characterised by cerebral amyloid
 CC angiopathy, particularly Alzheimer's disease, hereditary cerebral
 CC haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke.
 CC The present sequence represents one of a group of peptides (AAU11648-
 CC AAU11669, AAU11910 & AAU11911) that were used in the invention as a
 CC carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
 CC was used in the invention to treat a disease state characterised by
 CC cerebral amyloid angiopathy (CAA)

 XX Prevention and/or treatment of an amyloid-related disease e.g.
 PT Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.
 XX Claim 1; Page 59; 44pp; English.
 XX The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 XX invention

XX PT Novel nucleic acid molecule antisense to nucleic acid sequence encoding

PT prolamine, useful for reducing expression dose of protein in seed, and

PT for producing transgenic plant, preferably rice plant having reduced

PT storage protein.

XX Example 13; SEQ ID NO 117; 272pp; Japanese.

XX The present invention describes a nucleic acid molecule (I) comprising a

CC consecutive nucleic acid sequence (S1) of at least 15 bp in length and

CC complementary with a nucleic acid sequence encoding a prolamine

CC polypeptide or a nucleic acid sequence having a homology of at least

CC about 70% to (S1). Also described: (1) a nucleic acid molecule (N1)

CC comprising a nucleic acid sequence (A) having about 70% homology to a

CC nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid

CC sequence (B) having about 70% homology to the complement of the nucleic

CC acid sequence encoding a prolamine polypeptide; (2) a factor (II) capable

CC of causing RNA interference of the gene sequence encoding a prolamine

CC polypeptide; (3) a nucleic acid cassette (III) containing (1); (4)

CC producing (III); (5) a vector (IV) comprising (1); (6) a plant cell (V)

CC comprising (1); (7) a plant tissue (VI) comprising (V); (8) a plant (VII)

CC containing (1) or (V); (9) a seed (VIII) produced by (VII); (10) starch

CC preparation produced from (VII) or (VIII); and (11) a composition

CC containing gene product of foreign gene produced from (VII) or (VIII).

CC (I) is useful for decreasing the expression level of a protein in the

CC seed of a plant, for expressing a foreign gene in the seed of a plant and

CC for decreasing the expression of a natural protein in the seed of a

CC plant. The method of decreasing the amount of expression level of a

CC protein in the seed of a plant involves providing (I), introducing (I)

CC into the cell of the plant, redifferentiating the cell, producing a

CC transgenic plant, and obtaining the seed from the transgenic plant. The

CC method after the step of introduction, further involves selecting the

CC cell introduced with (I), by determining resistance with respect to

CC antibiotics. The method of expressing a foreign gene in the seed of a

CC plant, involves providing (I) and the nucleic acid molecule encoding a

CC foreign gene product, introducing (I) and the nucleic acid molecule

CC encoding a foreign gene product into cell of the plant, re-

CC differentiating the cell, producing a transgenic plant, and obtaining the

CC seed from the transgenic plant. The method further involves isolating the

CC gene product of the foreign gene from the seed. (I) is useful for

CC producing transgenic plants having reduced expression of storage proteins

CC and for reducing the expression dose of a protein in a seed of a plant.

CC The present sequence represents a rice 26kDa globulin signal sequence,

XX which is used in the exemplification of the present invention.

XX Novel DNA having sequence encoding allergen specific T-cell epitope

XX peptide, useful for accumulating T-cell epitope peptide in plants and for

PT treating allergic diseases such as pollinosis.

PT Disclosure; SEQ ID NO 5; 79pp; Japanese.

PS This invention relates to a DNA (I) having a sequence under the control

XX of a storage protein promoter, chosen from a sequence encoding storage

CC protein signal sequence at the 5' end of a sequence encoding allergen

CC specific T cell epitope peptide and/or a sequence encoding vesicle

CC anchoring signal sequence at the 3' end, and a DNA sequence encoding a

CC polypeptide having allergen specific T-cell epitope peptide inserted in

CC the variable region of a storage protein. Also disclosed is a vector (II)

CC for T-cell epitope accumulated plant preparation, and a method of

CC accumulating allergen specific T-cell epitope in a plant. The method

CC involves introducing (I) or (II) to a plant, obtaining DNA encoding

CC allergen specific T-cell epitope peptide, adding a DNA encoding a storage

CC protein signal sequence to the 5' end and/or a vesicle anchoring signal

CC sequence to the 3' end of the obtained DNA, and expressing the DNA in a

CC plant under the control of a storage protein promoter, or obtaining DNA

CC encoding allergen specific T-cell epitope peptide, inserting a DNA into

CC the variable region of storage protein of the plant and expressing the

CC peptide in the transgenic plant. The invention describes the accumulation

CC of human T cell epitope in rice albumen, a method of accumulating T cell

CC epitope-attached peptide (7crp) in seeds, a method of inserting the 7crp

CC into the variable region of glutelin (the major storage protein of rice),

CC and expressing and accumulating 7crp as part of the glutelin. The rice

CC capable of producing the 7crp is useful as an edible vaccine against

CC Japanese (Cryptomeria japonica) cedar pollen antigen. The pollen allergen

CC is Cryj1 or Cryj2. The T-cell epitope is integrated on an edible region

CC such as the seed of a plant. The method of the invention is useful for

CC producing a plant accumulated with allergen specific T-cell epitope, and

CC manufacturing a transgenic plant, preferably rice, integrated with T-cell

CC epitope. The method is useful for preventing or treating allergic disease

CC such as hay fever. The method enables the production of allergen specific

CC T-cell epitope at a low cost and also reduces the amount for

CC administration. The allergen specific T-cell epitope accumulated in a

CC seed is stable for storage. This sequence represents rice 26 kDa peptide.

PT Identifying modulators of AMP-activated protein kinase-mediated
PT activation of a nitric oxide synthase (NOS), for use in ischemic heart
PT disease, comprises testing for the increase or decrease in
PT phosphorylation of NOS.
XX
XX Example 4; Fig 5; 4lpp; English.
XX
CC The present sequence is the calmodulin (CaM)-binding region of mouse
CC inducible nitric oxide synthase (iNOS). iNOS is one of three isoforms of
CC the enzyme NOS, which synthesises nitric oxide from the amino acid L-
CC arginine. The sequence is provided for comparison with endothelial nitric
CC oxide synthase (eNOS). The threonine residue at position 495 of eNOS is
CC phosphorylated by AMP-activated protein kinase (AMPK) in the absence of
CC Ca2+-CaM. Phosphorylation results in inhibition of eNOS. In the presence
CC of Ca2+-CaM, phosphorylation by AMPK occurs predominantly at Ser-117 and
CC eNOS is activated. Modulators which activate AMPK may be used in the
CC treatment of ischemic heart disease by promoting glucose and fatty acid
CC metabolism, and improving nutrient and oxygen supply to the myocytes.
CC They may also be used for the treatment of pulmonary hypertension and
CC obstructive airways disease

XX
XX Example 1; SEQ ID NO 7; 82pp; English.
XX
CC The invention describes a method of creating critical limb ischaemia
CC (CLI) comprising administering to a patient a polynucleotide encoding a
CC mammalian eNOS (endothelial nitric oxide synthase) polypeptide. Also
CC described are: a method for treating angiogenesis by administering to a
CC patient a polynucleotide encoding eNOS; and ameliorating microvascular
CC dysfunction by administering to the patient the polynucleotide encoding
CC the eNOS polypeptide. The method is useful for treating critical limb
CC ischaemia or angiogenesis, or ameliorating a microvascular dysfunction.
CC This is the amino acid sequence of a human neuronal nitric synthase
CC (nNOS) calmodulin binding domain peptide.

PS	Example 1; SEQ ID NO 7; 57pp; English.
XX	
CC	The present sequence represents the calmodulin-binding site of mouse eNOS
CC	amino acid sequence. The present invention describes endothelial nitric
CC	oxide synthase (eNOS) mutants having one or more mutations in an amino
CC	acid sequence corresponding to a functional domain of a mammalian eNOS.
CC	At least one of the mutations is at a position corresponding to an amino
CC	acid residue in a calmodulin-binding domain that is phosphorylated in
CC	mammalian cells, and not an amino acid substitution to Ala or Asp. Also
CC	described: (1) an isolated eNOS polypeptide mutant that is substantially
CC	homologous, or has a 95-99% sequence identity to the amino acid sequence
CC	of the novel eNOS polypeptide mutant; (2) an isolated polynucleotide
CC	encoding the polypeptide mutant; (3) a recombinant vector comprising the
CC	polynucleotide operably linked to at least one regulatory sequence; (4) a
CC	pharmaceutical composition comprising the polypeptide mutant or the
CC	polynucleotide; (5) a binding partner of the polypeptide mutant; (6)
CC	modulating eNOS activity in a cell by administering to the cell the
CC	polypeptide mutant; (7) modulating eNOS activity in a cell by
CC	administering the polypeptide mutant or the polynucleotide to the cell,
CC	such that the polypeptide mutant is expressed in the cell; (8) diagnosing
CC	a condition associated with aberrant eNOS activity by contacting a cell
CC	of a patient with the polynucleotide, and detecting a level of eNOS
CC	activity indicative of the medical condition; and (9) prophylactic and
CC	therapeutic methods of treating a condition associated with aberrant eNOS
CC	activity by administering the polypeptide mutant or polynucleotide to the
CC	patient. The eNOS mutant has vasotropic, antiarteriosclerotic,
CC	hypotensive, antidiabetic, vulnerable, antilipemic and anorectic
CC	activities, and has reduced calcium dependence and increased activity.
CC	The polypeptide mutant, polynucleotide and methods are useful for
CC	diagnosing or treating a condition associated with aberrant eNOS
CC	activity, e.g. ischaemia, atherosclerosis, hypertension, diabetes,
CC	Raynaud's phenomenon, poor wound healing, hyperlipidaemia or obesity.

New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.

Claim 27; Page; 190pp; English.

This invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

PT New PRO polypeptides, useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, thyroiditis or diabetes mellitus.
XX
PS Claim 10; SEQ ID NO 8; 918pp; English.

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neurotrophic factors and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present sequence is the amino acid sequence of a human PRO protein of the invention.

XX PT Identifying a mitochondrial target for drug screening assays and for
XX PT treating diseases associated with altered mitochondrial function,
XX PT comprises detecting a modified polypeptide in a sample and correlating
XX PT with the disease.
XX PS Claim 1; SEQ ID NO 2031; 180pp; English.
XX CC This invention relates to novel mitochondrial targets that can be used
XX CC for therapeutic intervention in treating a disease associated with
XX CC altered mitochondrial function. Specifically, it refers to a method for
XX CC identifying proteins of the human heart mitochondrial proteome that are
XX CC useful for drug screening assays, as well as therapeutic targets. The
XX CC present invention describes a method for identifying such proteins that
XX CC can be used in the treatment of various diseases associated with altered
XX CC mitochondrial function including diabetes mellitus, Huntington's disease,
XX CC osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial
XX CC encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
XX CC ragged red fibre syndrome (MERRF) or cancer. Accordingly, these
XX CC compositions have neuroprotective, neurotropic, antidiabetic,
XX CC anticonvulsant, antiarthritic, osteopathic, ophthalmological and
XX CC cytostatic activities. This polypeptide sequence is a human heart
XX CC mitochondrial protein of the invention.

XX PT Testing for bronchial asthma or chronic obstructive pulmonary disease by
XX PT comparing the expression level of a marker gene in a biological sample
XX PT from a subject with the expression level of the gene in a sample from a
XX PT healthy subject.
XX PS Example 11; SEQ ID NO 680; 241pp; English.
XX CC The present invention describes a method of testing for bronchial asthma
XX CC or chronic obstructive pulmonary disease. The method comprises
XX CC determining the expression level of a marker gene in a biological sample
XX CC from a subject, comparing the expression level determined with the
XX CC expression level of the marker gene in a biological sample from a healthy
XX CC subject, and judging whether the subject has bronchial asthma or chronic
XX CC obstructive pulmonary disease. The marker gene comprises: (a) a group of
XX CC genes (S1) whose expression levels increase when respiratory epithelial
XX CC cells are stimulated with interleukin-13; or (b) a group of genes (S2)
XX CC whose expression levels decrease when respiratory epithelial cells are
XX CC stimulated with interleukin-13. Also described: (1) a reagent (1) for
XX CC testing for bronchial asthma or chronic obstructive pulmonary disease;
XX CC (2) a kit for screening for a candidate compound for a therapeutic agent
XX CC to treat bronchial asthma or chronic obstructive pulmonary disease; (3)
XX CC an animal model for bronchial asthma or chronic obstructive pulmonary
XX CC disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a
XX CC method for producing an animal model for bronchial asthma or chronic
XX CC obstructive pulmonary disease; (6) a therapeutic agent for bronchial
XX CC asthma or chronic obstructive pulmonary disease, comprising the compound,
XX CC a marker gene or an antisense nucleic acid corresponding to a portion of
XX CC the marker gene, a ribozyme, a polynucleotide that suppresses the
XX CC expression of the gene through an RNAi effect or an antibody recognising
XX CC a protein encoded by a marker gene; and (7) a DNA chip for testing for
XX CC bronchial asthma or a chronic obstructive pulmonary disease, on which a
XX CC probe has been immobilised to assay a marker gene. (1) has respiratory
XX CC and antiasthmatic activities, and can be used in gene therapy. The method
XX CC is useful for testing for or screening for a therapeutic agent for
XX CC bronchial asthma or chronic obstructive pulmonary disease. The present
XX CC sequence is used in the exemplification of the present invention.

DR New isolated polynucleotides and polypeptides associated with NF-kappaB

PT pathway, useful for diagnosing, treating, or preventing disorders or

PT diseases associated with NF-kappaB pathway.

XX Claim 6; SEQ ID NO 234; 237pp; English.

XX This invention relates to the novel association of protein sequences (and

CC the genes which encode them) to the NF-kappaB pathway. The invention may

CC be useful for the production of compounds with an antiinflammatory,

CC cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic,

CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic,

CC immunomodulator, cerebroprotective, vasotropic, immunosuppressive or

CC vulnery activity or for gene therapy. The proteins and nucleotides are

CC useful for diagnosing, preventing, treating, or ameliorating conditions

CC or diseases associated with the NF-kappaB pathway. The condition is an

CC immune disorder, an inflammatory disorder, an inflammatory disorder

CC related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis,

CC hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM

CC syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic

CC ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1,

CC hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell

CC survival, evasion of immune responses, rheumatoid arthritis, inflammatory

CC bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick

CC syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper

CC immune activity, disorders related to aberrant acute phase responses,

CC hypercongenital conditions, birth defects, necrotic lesions, wounds,

CC organ transplant rejection, conditions related to organ transplant

CC rejection, disorders related to aberrant signal transduction,

CC proliferating disorders, cancers and HIV propagation in cells infected

CC with other viruses. The present sequence is that of a human protein which

CC is subject to the novel association with the NF-kappaB pathway of the

CC invention. Note: This sequence does not appear in the specification but

CC was obtained by the indexer from Genbank.

XX New PRO polypeptides and polynucleotides, useful for treating e.g.

PT erythematous, rheumatoid arthritis, diabetes mellitus, immune-mediated

PT renal disease, or demyelinating diseases of the central or peripheral

XX nervous system.

PS Claim 7; SEQ ID NO 2189; 2940pp; English.

XX The invention relates to a novel isolated nucleic acid and the PRO

CC polypeptide encoded by it. A protein of the invention has

CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,

CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,

CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide

CC of the invention may have a use in gene therapy. The PRO polypeptide, its

CC agonist, antagonist, or antibody that specifically binds to the

CC polypeptide is useful for treating an immune related disorder such as

CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,

CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an

CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic

CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune

CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal

CC disease, a demyelinating disease of the central or peripheral nervous

CC system, idiopathic demyelinating polynuropathy, Guillain-Barre syndrome,

CC a chronic inflammatory demyelinating polynuropathy, a hepatobiliary

CC disease, infectious or autoimmune chronic active hepatitis, primary

CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,

CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's

CC disease, an autoimmune or immune-mediated skin disease, a bullous skin

CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic

CC disease, asthma, allergic rhinitis, atopic dermatitis, food

CC hypersensitivity, urticaria, an immunologic disease of the lung,

CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity

CC pneumonia, a transplantation associated disease, graft rejection or
 CC graft-versus-host disease. The present sequence represents a PRO protein
 CC of the invention.

XX PT Identifying an agent that modulates the function of an apoptosis-
 PT associated polypeptide, useful for diagnosing or treating e.g. cancer,
 PT comprises comparing the binding of the polypeptide to the candidate agent
 PT and to a control agent.

XX PS Claim 1; SEQ ID NO 2; 304pp; English.

XX CC This invention relates to novel agents that modulates the function of
 CC human apoptosis-associated proteins specified within the specification.
 CC Specifically, it refers to a method for the identification of target
 CC genes whose expression is correlated with an early stage in the
 CC regulation of apoptosis. The present invention describes a method of
 CC contacting either candidate agents or control agents to the target genes
 CC and assessing the difference of binding and inhibitory activity, where
 CC the candidate agent is selected from a low molecular weight organic
 CC molecule, an antibody or fragment thereof, an antisense oligonucleotide,
 CC a small inhibitory dsRNA, or a ribozyme. As such, the compositions and
 CC methods are useful for diagnosing and treating diseases or conditions
 CC associated with abnormal apoptosis in mammalian tissue, such as cancer,
 CC inflammation, autoimmune or neurodegenerative disorders. Accordingly,
 CC they exhibit cytostatic, antiinflammatory, immunosuppressive and
 CC neuroprotective activities. These may also be used for drug screening
 CC purposes and in gene therapy. This polypeptide sequence is a human target
 CC protein, an enzyme associated with the regulation of apoptosis whose
 CC expression is modulated by novel agents of the invention.

 XX
 XX A mammalian cell receptor, useful in the treatment of cancer by binding
 PT to tumor associated lipids where the binding induces anergy or apoptosis
 PT in T cells and antigen presenting cells.
 XX
 XX Example 2; Page; 167pp; English.
 PS
 XX The invention relates to a mammalian cell receptor, useful in the
 CC treatment of cancer, which binds to tumour associated lipids and induces
 CC anergy or apoptosis in the T cells and antigen presenting cells (APCs).
 CC Also included are a mammalian cell useful in the treatment of cancer
 CC where the receptor which binds tumour associated lipids and induces
 CC cellular inactivation or death is deleted or functionally deactivated,
 CC producing (M1) a tumouricidal immunocyte population in vivo in a mammal
 CC (by allowing tumour associated lipids to contact immunocytes in which
 CC receptors for immunosuppressive fatty acids, ceramides, glycolipids,
 CC sphingolipids, glycosphingolipids, phosphosphingolipids, gangliosides,
 CC sialylated glycans, lipopeptides and proteoglycolipids are inactivated or
 CC deleted), a construct useful in the treatment of cancer comprising a
 CC superantigen (SAG) nucleotide inserted into a virus, a mammalian T cell
 CC useful in the treatment of cancer (where an adaptor protein which
 CC inhibits T cell activation by tumour associated antigens is deleted or
 CC functionally deactivated), a composition useful in the treatment of
 CC cancer (comprising a lipid raft conjugated to a superantigen), producing
 CC (M2) a tumouricidal immunocyte population ex vivo in a mammal (by
 CC allowing tumour associated lipids to contact immunocytes, in which
 CC receptors for the lipids are inactivated or deleted to produce a
 CC tumouricidal immunocyte population, and administering the tumouricidal
 CC activated immunocytes to the host), producing (M3) a tumouricidal APC
 CC population ex vivo in a mammal (by allowing a tumour associated lipid to

CC contact APCs, in which receptors for the tumour associated lipids are
 CC inactivated or deleted to produce a tumouricidally activated population,
 CC and administering APCs to the host), producing a tumouricidal T cell
 CC population ex vivo in a mammal) by allowing a tumour associated lipids to
 CC contact T cells, in which adaptor proteins, which inhibit T cell
 CC activation by tumour associated antigens, are deleted or functionally
 CC deactivated to produce a tumouricidal population of T cells, and
 CC administering the tumouricidally activated T cells to the host, or
 CC allowing a superantigen-lipid raft to contact T cells ex vivo, and
 CC administering the tumouricidally activated T cells to the host), treating
 CC (M5) cancer in a mammal (by administering a lipid binding molecule which
 CC binds immunosuppressive tumour associated lipids in vivo), producing (M6)
 CC a tumouricidal T cell population in vivo in a mammal (by allowing a
 CC tumour associated antigen to contact immunocytes in which adaptor
 CC proteins which inhibit T cell activation by tumour associated antigens
 CC are deleted or functionally deactivated) and producing (M7) a
 CC tumouricidal T cell population ex vivo in a mammal comprising allowing a
 CC superantigen-lipid raft conjugate to contact immunocytes in vivo. The
 CC receptors, methods and compositions are useful for treating cancers and
 CC tumours. Bacterial superantigens are co-administered or administered as
 CC fusion constructs with anti-tumour proteins or motifs. The present
 CC sequence represents an anti-tumour protein which is co-administered with
 CC or incorporated into a fusion construct with a superantigen. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format from the US patent
 CC office website at "seqdata.uspto.gov/sequence.html?DocID=20020177551"

XX New isolated polynucleotide encoding a variant of a corresponding wild-
 PT type nitric oxide synthase, useful for reducing the restenotic response
 PT after angioplasty, or for inhibiting the development or onset of
 PT premature labor.

PS Disclosure; SEQ ID NO 5; 35pp; English.

XX The invention relates to an isolated polynucleotide encoding a variant of
 CC a corresponding wild-type nitric oxide synthase (NOS). The variant has
 CC the tryptophan in the alpha 3 helix substituted by tyrosine or
 CC phenylalanine. Also included are a nucleic acid construct comprising the
 CC nucleotide sequence that encodes a variant of a corresponding wild-type
 CC nitric oxide synthase and a promoter operably linked to the encoding
 CC sequence of the variant and a transformed cell comprising the construct,
 CC where the cell expresses the nitric oxide synthase variant. The variant
 CC has an in vitro enzymatic activity that is greater than the in vitro
 CC enzymatic activity of the corresponding wild-type nitric oxide synthase.
 CC The variant can preferably be of a corresponding wild-type endothelial
 CC nitric oxide synthase (eNOS), neuronal nitric oxide synthase (nNOS), or

CC inducible nitric oxide synthase (iNOS). The polynucleotides are useful
 CC for reducing the restenotic response after angioplasty, or related
 CC interventional procedures, or to enhance the vasodilation response in
 CC treating angina, for anticancer therapy to promote cell death, and for
 CC inhibiting the development or onset of premature labour. The
 CC polynucleotides are useful to achieve or augment expression of NOS
 CC variant proteins or polypeptides in vivo to increase NOS production in
 CC target tissue, tumour tissue, tissue of the nervous system, including
 CC brain, penis (e.g. in erectile dysfunction) and uterine tissue, and lung
 CC tissue. NOS is useful for maintaining vascular tone and regulating
 CC regional blood flow. The present sequence is wild-type mouse iNOS.

XX Testing for bronchial asthma or chronic obstructive pulmonary disease by
 PT comparing the expression level of a marker gene in a biological sample
 PT from a subject with the expression level of the gene in a sample from a
 PT healthy subject.

XX Claim 16; SEQ ID NO 1464; 241pp; English.

XX The present invention describes a method of testing for bronchial asthma
 CC or chronic obstructive pulmonary disease. The method comprises
 CC determining the expression level of a marker gene in a biological sample
 CC from a subject, comparing the expression level determined with the
 CC expression level of the marker gene in a biological sample from a healthy
 CC subject, and judging whether the subject has bronchial asthma or chronic
 CC obstructive pulmonary disease. The marker gene comprises: (a) a group of
 CC genes (S1) whose expression levels increase when respiratory epithelial
 CC cells are stimulated with interleukin-13; or (b) a group of genes (S2)
 CC whose expression levels decrease when respiratory epithelial cells are
 CC stimulated with interleukin-13. Also described: (1) a reagent (I) for
 CC testing for bronchial asthma or chronic obstructive pulmonary disease;

CC (2) a kit for screening for a candidate compound for a therapeutic agent
 CC to treat bronchial asthma or chronic obstructive pulmonary disease; (3)
 CC an animal model for bronchial asthma or chronic obstructive pulmonary
 CC disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a
 CC method for producing an animal model for bronchial asthma or chronic
 CC obstructive pulmonary disease; (6) a therapeutic agent for bronchial
 CC asthma or chronic obstructive pulmonary disease, comprising the compound,
 CC a marker gene or an antisense nucleic acid corresponding to a portion of
 CC the marker gene, a ribozyme, a polynucleotide that suppresses the
 CC expression of the gene through an RNAi effect or an antibody recognising
 CC a protein encoded by a marker gene; and (7) a DNA chip for testing for
 CC bronchial asthma or a chronic obstructive pulmonary disease, on which a
 CC probe has been immobilised to assay a marker gene. (I) has respiratory
 CC and antiasthmatic activities, and can be used in gene therapy. The method
 CC is useful for testing for or screening for a therapeutic agent for
 CC bronchial asthma or chronic obstructive pulmonary disease. The present
 CC sequence is used in the exemplification of the present invention.

PT New composition for treating a tumor or neoplastic disease in a subject
 PT comprises conjugates comprising superantigen polypeptides or nucleic
 PT acids with other molecules that produce a tumoricidal response.

PS Example 3; SEQ ID NO 101; 125pp; English.

XX The invention relates to a composition for treating a tumor or neoplastic
 CC disease in a subject. Also described: (1) a mammalian cell comprising an

CC exogenous nucleic acid encoding a superantigen expressed in the cell,
 CC which cell also produces or expresses all alpha-anomers of
 CC monoglycosylceramide or diglycosylceramide, where expression of the
 CC superantigen and the mono- or diglycosylceramide is capable of eliciting
 CC an antitumor immune response in a mammal into which the cell is
 CC introduced; (2) treating a tumor or neoplastic disease in a subject; (3)
 CC preparing a population of immunotherapeutic T or natural killer T (NKT)
 CC cells useful to treat a tumor or neoplastic disease in a subject; (4) an
 CC apoptotic cell preparation or lysate useful for treating a tumor or
 CC neoplastic disease in a subject, comprising a cell population that has
 CC been transfected with naked DNA encoding a superantigen, and treated to
 CC undergo apoptosis or lysis; and (5) a cell that has ingested or been
 CC transfected with the above apoptotic preparation or lysate, thus,
 CC rendering the cell effective in presenting material expressed from
 CC transfecting nucleic acid or material ingested to the immune system of a
 CC mammal to elicit an anti-tumor immune response. The composition and
 CC methods are useful for treating tumors or neoplastic diseases. The
 CC present sequence represents a VEGF protein sequence, which is used in an
 CC example from the present invention. Note - The sequence data for this
 CC patent is not represented in the printed specification, but was obtained
 CC in electronic format directly from the USPTO web site.

XX Preventing/treating amyloid-related disease, especially Alzheimer's
 PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.

XX Disclosure; Page 10; 31pp; English.

XX The present sequence is that of an all-D peptide suitable for use for
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC CAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX

CC The invention relates to an amyloid-targeting imaging agent comprising an
CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
CC agent is of general formula A.t-(A.l.n.k)z-A.l.a.b (t) where z = 0 - 1;
CC A.t = an amyloid targeting moiety; A.l.n.k = a linker moiety; and A.l.a.b
CC = a labelling moiety. Also included are imaging amyloid deposition or
CC diagnosing an amyloid-related condition in a patient involving
CC administering (i) to the patient, and ultrasound imaging (i) in the
CC patient to determine the presence of amyloid or amyloid-related condition
CC ; and a kit for preparing a radiopharmaceutical preparation comprising
CC (i) a reducing agent, a buffering agent, a transchelating agent, and
CC instructions for the preparation and use of the radiopharmaceutical in
CC the imaging of amyloid or an amyloid-related condition. The agents are
CC used for imaging amyloid deposition and for diagnosing an amyloid related

CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementias), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 XX inhibitor.

XX Disclosure; Page 10; 68pp; English.

XX The present invention relates to a new method of inhibiting cerebral
 CC amyloid angiopathy. The new method of the invention involves contacting a

CC blood vessel wall cell with an amyloid-beta40 inhibitor. The invention
 CC can be used for treating disease states characterised by cerebral amyloid
 CC angiopathy, particularly Alzheimer's disease, hereditary cerebral
 CC haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke.
 CC The present sequence represents one of a group of peptides (AAU11648-
 CC AAU11669, AAU11910 & AAU11911) that were used in the invention as a
 CC carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
 CC was used in the invention to treat a disease state characterised by
 CC cerebral amyloid angiopathy (CAA)

XX Prevention and/or treatment of an amyloid-related disease e.g.

XX Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.

XX Claim 1; Page 59; 44pp; English.

XX The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

XX Composition for treating e.g. Alzheimer's disease comprises first agent
 CC that prevents or treats amyloid-beta related disease and second agent
 CC that is either a peptide or peptidomimetic or an immune system modulator.

XX Disclosure; Page 69; 143pp; English.

XX The present invention describes compositions (C) comprising: (a) a first
 CC agent (a1) that prevents or treats amyloid-beta related disease; and (b)
 CC a second agent (a2) that is: (i) a peptide or peptidomimetic that
 CC modulates amyloid-beta fibril formation or induces a prophylactic or
 CC therapeutic immune response against amyloid-beta fibril formation; or
 CC (ii) an immune system modulator that prevents or inhibits amyloid-beta
 CC fibril formation. Also described is a kit comprising (C). (C) have
 CC neurotropic, neuroprotective, cerebroprotective, haemostatic,
 CC ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser,

CC uropathic, anticonvulsant, anti-HIV, antiparkinsonian, muscular,
 CC neuroleptic, cardiant, antidepressant, endocrine and hypnotic activities,
 CC and can be used as amyloid-beta fibril formation modulators' and as
 CC immune system modulators. (C) can be used for preventing or treating an
 CC amyloid-beta related disease e.g. Alzheimer's disease (including sporadic
 CC (non-hereditary) or familial (hereditary)), mild cognitive impairment,
 CC mild-to-moderate cognitive impairment, vascular dementia, cerebral
 CC amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia,
 CC Down's syndrome, inclusion body myositis, age-related macular
 CC degeneration, or a condition associated with Alzheimer's disease
 CC (including hypothyroidism, cerebrovascular disease, cardiovascular
 CC disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy,
 CC aggression, or incontinence), a neurological condition (e.g. Huntington's
 CC disease, amyotrophic lateral sclerosis, acquired immunodeficiency,
 CC Parkinson's disease, aphasia, apraxia, agnosia, Pick disease, dementia
 CC with Lewy bodies, altered muscle tone, seizures, sensory loss, visual
 CC field deficits, incoordination, gait disturbance, transient ischaemic
 CC attack or stroke, transient alertness, attention deficit, frequent falls,
 CC syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural
 CC haematoma, brain tumour, posttraumatic brain injury, or posthypoxic
 CC damage), or a psychological condition (e.g. depression, delusions,
 CC illusion, hallucination, sexual disorder, weight loss, psychosis, a sleep
 CC disturbance, insomnia, behavioural disinhibition, poor insight, suicidal
 CC ideation, depressed mood, irritability, anhedonia, social withdrawal, or
 CC excessive guilt)) in a subject e.g. human having a genomic mutation in an
 CC amyloid precursor protein gene, an ApoE gene, or a presenilin gene;
 CC having amyloid-beta deposits. The present sequence represents a peptide
 CC that can be used as an antifibrillogenic amyloidosis inhibiting peptide
 CC in the exemplification of the present invention.

XX New amyloid-targeting imaging agent, useful for diagnosing an amyloid-
XX related condition, e.g. Creutzfeldt-Jakob disease, bovine spongiform
XX encephalopathy, primary amyloidosis or Alzheimer's disease.

XX Disclosure; SEQ ID NO 1; 34pp; English.

CC The invention relates to an amyloid-targeting imaging agent. The imaging
CC agent comprises an amyloid targeting moiety (such as a peptide) joined to
CC the labeling moiety via a linking moiety, and is preferably able to cross
CC the blood-brain barrier. The invention also relates to a kit for
CC preparing a radiopharmaceutical preparation from the imaging agent and a
CC invention, a method for imaging amyloid deposition in a patient and a
CC method for diagnosing an amyloid-related condition in a patient. The
CC amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
CC related conditions such as Creutzfeldt-Jakob disease (CJD), Kuru,
CC transmissible cerebral amyloidosis (also known as transmissible virus
CC dementias), familial CJD, scrapie, transmissible mink encephalopathy,
CC bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
CC type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
CC non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
CC mediated diseases, dialysis-related amyloidosis, light chain-related
CC amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
CC patient. The agent does not exhibit excessive toxicity or irritation,
CC does not induce an allergic response, and permits an earlier diagnosis of
CC amyloid-related conditions, thereby allowing earlier treatment and hence
CC prevention of the undesirable effects of such disorders. Sequences
CC ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
CC the amyloid-targeting moiety in an imaging agent of the invention.

 CC AAW02310-W02332 represent the peptide portions of the beta-amyloid
 CC modulator compounds of the invention. Beta-amyloid peptide is a 4
 CC kilodalton peptide that is the major protein component of amyloid
 CC plaques. Amyloid plaques are present both in the brain lesions, and in
 CC the walls of cerebral blood vessels in Alzheimer's disease patients. The
 CC amyloid modulators of the invention comprise an amyloidogenic protein or
 CC peptide (such as this sequence) coupled directly or indirectly to at
 CC least one modifying group. The modifying group is preferably a cyclic,
 CC heterocyclic, or polycyclic group, such as decalin, a cholanyl group, a
 CC biotin containing group, or a fluorescein containing group. These
 CC compounds then modulate the aggregation of these sequences to natural
 CC amyloid proteins or peptides when contacted with the natural
 CC amyloidogenic proteins or peptides. The modulator compounds can be used
 CC in the treatment of disorders associated with amyloidosis, such as
 CC familial amyloid polyneuropathy, familial amyloid cardiomyopathy,
 CC isolated cardiac amyloidosis, systemic senile amyloidosis, scrapie,
 CC bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset
 CC diabetes, insulinoma, familial Mediterranean fever, familial amyloid
 CC nephropathy with urticaria and deafness, hereditary cerebral haemorrhage
 CC and other types of amyloidosis. The modulators are also useful for the
 CC treatment of disorders associated with beta-amyloidosis, especially
 CC Alzheimer's disease

PT Antifibrillogenic agent useful for inhibiting amyloidosis and/or for
PT cytoprotection for treating amyloidosis disorders, comprises a peptide,
PT its isomer or peptidomimetic.
XX
XX
PS Claim 7; Page 25; 46pp; English.
XX
CC Peptides AAB48474-B48496 are antifibrillogenic agents that can be used
CC for inhibiting amyloidosis and/or for cytoprotection. The peptides of
CC AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore
CC useful for treating amyloidosis disorders such as Alzheimer's disease.
CC Peptides AAB48474-B48496 were identified from the glycosaminoglycan
CC binding region and the prot-prot interaction region of the human amyloid
CC protein

XX Preventing/treating amyloid-related disease, especially Alzheimer's
PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
PT which elicits production of antibodies to prevent fibrillogenesis and
PT associated cellular toxicity.
XX
XX Disclosure; Page 11; 31pp; English.
XX
CC The present sequence is that of an all-D peptide suitable for use for
CC preparing vaccines for preventing or treating Alzheimer's disease and
CC other amyloid related disorders in humans. It is based on a portion of
CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
CC inserting 1 or more amino acid residues, or by substituting 1 or more

CC amino acid residues with other amino acid residues or non-amino acid
CC fragments. Vaccines of the invention are produced using 'non-self'
CC peptides synthesised from the unnatural D-configuration amino acids to
CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
CC aggregated to be operative or immunogenic. They preferably interact with
CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
CC fragments, protein conjugates, immunogenic derivative peptides and
CC immunogenic peptidomimetics. Examples include all-D peptides
CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
CC related diseases may be localised amyloidosis, e.g. diabetes type II,
CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
CC prion protein related disorders, or systemic amyloidosis associated with
CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
CC amyloidosis found in long-term haemodialysis patients. The present all-D
CC peptide was demonstrated to elicit antibody production in rabbits, and
CC provided greater anti-fibrillogenic activity than its all-L equivalent

 XX
 XX Amyloid modulator useful for treating a disorder associated with
 PT amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment
 PT coupled to a modifying group.
 XX
 XX Example 12; Page 35; 41pp; English.
 XX
 CC The invention describes an amyloid modulator comprising an amyloidogenic
 CC protein and/or peptide fragment coupled to a modifying group so that the
 CC compound modulates the aggregation of natural amyloid proteins or
 CC peptides. The modulator is used for treating a disorder associated with
 CC amyloidosis e.g. familial amyloid polynuropathy (Portuguese, Japanese
 CC and Swedish types), familial amyloid cardiomyopathy (Danish type),
 CC isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
 CC spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset
 CC diabetes, Gerstmann-Strausler-Scheinker syndrome, insulinoma, isolated
 CC atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or
 CC macroglobulinaemia-associated amyloidosis, primary localised cutaneous
 CC nodular amyloidosis associated with Sjogren's syndrome, reactive
 CC (secondary) amyloidosis, familial Mediterranean Fever and familial
 CC amyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome),
 CC hereditary cerebral haemorrhage with amyloidosis of Icelandic type,
 CC amyloidosis associated with long term haemodialysis, hereditary non-
 CC neuropathic systemic amyloidosis (familial amyloid polynuropathy III),
 CC familial amyloidosis of Finnish type, amyloidosis associated with
 CC medullary carcinoma of the thyroid, fibrinogen-associated hereditary
 CC renal amyloidosis and lysosome-associated hereditary systemic
 CC amyloidosis. The compound is capable of altering and inhibiting beta-
 CC amyloid protein (beta-AP) aggregation of natural amyloidogenic proteins
 CC or peptides when contacted with a molar excess amount of natural beta-APs
 CC relative to the modulator. This sequence represents a fragment of the
 CC long form of beta-amyloid used in the creation of an amyloid modulator

 XX
 CC Amyloid modulator compound useful for treatment of an amyloidogenic
 CC disease such as Alzheimer's disease comprises an aggregation core domain
 CC and a modifying group attached to it.
 XX
 PS Disclosure; Col 18; 54pp; English.
 XX
 CC The present invention describes an amyloid modulator compound (I)
 CC comprising an aggregation core domain and a modifying group attached to
 CC it. (I) has neurotropic, neuroprotective, immunosuppressive, antimicrobial,
 CC antidiabetic, antipyretic, dermatological, cardiovascular, nephrotropic
 CC and auditory activities, and can be used as a natural amyloid aggregation
 CC inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide
 CC (beta-AP). (I) are used in the manufacture of a medicament for the
 CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's
 CC disease and other clinical occurrences of beta amyloid deposition such as
 CC Down's syndrome individuals and in patients with hereditary cerebral
 CC haemorrhage with amyloidosis, and for treating a disorder associated with
 CC amyloidosis such as familial amyloid polynuropathy. (I) reduces the
 CC toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)
 CC not only reduces the formation of neurotoxic aggregates but also have the
 CC ability to reduce the neurotoxicity of performed A-beta fibrils. The
 CC present sequence represents a beta-AP peptide, which is used in the
 CC exemplification of the present invention

"The C-terminal (haemopexin-like) domain structure of human gelatinase A (MMP2): structural implications for its function."; FEBS Lett. 378:126-130(1996).

-1- FUNCTION: In addition to gelatin and collagens, it cleaves KISS1 at a Gly-|-Leu bond.

-1- CATALYTIC ACTIVITY: Cleavage of gelatin type I and collagen types IV, V, VII, X. Cleaves the collagen-like sequence Pro-Gln-Gly-|-Ile-Ala-Gly-Gln.

CC -|- COFACTOR: Binds 4 calcium ions per subunit.
 CC -|- COFACTOR: Binds 2 zinc ions per subunit.
 CC -|- ENZYME REGULATION: Inhibited by histatin-3 1/24 (histatin-5).
 CC -|- SUBUNIT: Ligand for integrin alpha-V/beta-3.
 CC -|- TISSUE SPECIFICITY: Produced by normal skin fibroblasts.
 CC -|- PTM: The propeptide is processed by MMP14 (MT-MMP1) and MMP16 (MT-MMP3).
 CC -|- SIMILARITY: Belongs to the peptidase M10A family.
 CC -|- SIMILARITY: Contains 3 fibronectin type-II domains.
 CC -|- SIMILARITY: Contains 1 hemopexin-like domain.

 CC -!- FUNCTION: Produces nitric oxide (NO) which is a messenger molecule
 with diverse functions throughout the body.
 CC -!- CATALYTIC ACTIVITY: L-arginine + n NADPH + m O(2) = citrulline +
 nitric oxide + n NADP(+).
 CC -!- COFACTOR: Heme.
 CC -!- COFACTOR: FAD. Binds 1 mole of FAD.
 CC -!- COFACTOR: FMN. Binds 1 mole of FMN.
 CC -!- COFACTOR: Tetrahydrobiopterin (BH4). May stabilize the dimeric
 form of the enzyme.
 CC -!- ENZYME REGULATION: Not stimulated by calcium/calmodulin. Aspirin
 inhibits expression and function of this enzyme and effects may be
 exerted at the level of translational/posttranslational
 modification and directly on the catalytic activity (By
 similarity).
 CC -!- SUBUNIT: Homodimer. Binds SLC9A3R1 (By similarity).
 CC -!- TISSUE SPECIFICITY: In normal kidney, expressed primarily in the
 medullary thick ascending limb, with minor amounts in the
 medullary collecting duct and vasa recta bundle.
 CC -!- INDUCTION: By interferon gamma and lipopolysaccharides (LPS).
 CC -!- SIMILARITY: Belongs to the NOS family.
 CC -!- SIMILARITY: Contains 1 flavodoxin-like domain.
 CC -!- CAUTION: Ref.9 sequence was originally thought to originate from
 human but appears to be from rat.

 CC This Swiss-Prot entry is copyright. It is produced through a collaboration
 between the Swiss Institute of Bioinformatics and the EMBL Outstation -

CC the European Bioinformatics Institute. There are no restrictions on its
 CC use as long as its content is in no way modified and this statement is not

RA Nygaard P., Bested S.M., Andersen K.A.K., Saxild H.H.;
RT "Bacillus subtilis guanine deaminase is encoded by the yknA gene and
RT is induced during growth with purines as the nitrogen source.";
RL Microbiology 146:3061-3069(2000).
CC -!- FUNCTION: Catalyzes the hydrolytic deamination of guanine,
CC producing xanthine and ammonia.
CC -!- CATALYTIC ACTIVITY: Guanine + H(2)O = xanthine + NH(3).
CC -!- COFACTOR: Zinc (By similarity).
CC -!- PATHWAY: Purine catabolism.
CC -!- INDUCTION: Expressed only during limited or partially limited
CC nitrogen conditions. Can be induced to high levels in the presence
CC of purines or intermediates of the purine catabolic pathway.
CC Expression seems indirectly controlled by tnrA and glnR.
CC -!- SIMILARITY: Belongs to the cytidine and deoxycytidylate deaminase
CC family.

CC -1- FUNCTION: Heat stable protein, that interacts with zyxin. May be a
CC component of a signal transduction pathway that mediates adhesion-
CC stimulated changes in gene expression.
CC -1- SUBUNIT: Monomer.
CC -1- SUBCELLULAR LOCATION: Associates with the actin cytoskeleton.
CC -1- TISSUE SPECIFICITY: Most prominent in tissues that are enriched in
CC smooth muscle cells, such as gizzard, stomach, and intestine.
CC Lower level in the heart, no expression in liver, skeletal muscle,
CC or brain.
CC -1- DEVELOPMENTAL STAGE: Expression levels increase dramatically
CC during smooth muscle maturation.
CC -1- DOMAIN: Glycine-rich repeats mediate the association with the
CC actin cytoskeleton (Probable).
CC -1- SIMILARITY: Contains 2 LIM zinc-binding domains.

CC -1- FUNCTION: Part of the ABC transporter complex cysAWTP involved in
CC sulfate/chiosulfate import. Responsible for energy coupling to the
CC transport system (By similarity).
CC -1- CATALYTIC ACTIVITY: ATP + H(2)O + sulfate(Out) = ADP + phosphate +
CC sulfate(In).

CC -1- SUBUNIT: The complex is composed of two ATP-binding proteins
CC (cysA), two transmembrane proteins (cysT and cysW) and a solute-
CC binding protein (cysP) (Probable).
CC -1- SUBCELLULAR LOCATION: Inner membrane-associated (By similarity).
CC -1- SIMILARITY: Belongs to the ABC transporter family.
CC Sulfate/tungstate importer (TC 3.A.1.6) subfamily.
CC -1- SIMILARITY: Contains 1 ABC transporter domain.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
